Re: Site 886 (FTMM-66) Remedial Action Progress Report
April 2003 through December 2008 (2nd Quarter 2003 – 4th Quarter 2008)
Dated: September 2010
Fort Monmouth, New Jersey

Dear Mr. Quinn:

U.S. Army Fort Monmouth, New Jersey is pleased to submit the *Remedial Action Progress Report* (RAPR) for Site 886 (FTMM-66), Fort Monmouth, New Jersey. This RAPR was prepared in accordance with the voluntary cleanup agreement between U.S. Army and the New Jersey Department of Environmental Protection (NJDEP) dated August 2000, and the NJDEP's *Technical Requirements for Site Remediation* (*TRSR*), New Jersey Administrative Code 7:26E-6.5 (February 2002). Enclosed please find the Electronic Data Delivery (EDD) documents and the completed RAPR Checklist.

Should you have any questions or require any additional information, please contact Mr. Charles Appleby, Environmental Protection Specialist, at 732-532-2692 or email: **Charles.Appleby@US.Army.mil**

Sincerely,

Joseph M. Fallon

Joseph M. Fallon, CHMM
Chief, Environmental Branch

Encl. 1: RAPR, (2nd Quarter 2003 through 4th Quarter 2008)
Encl. 2: Completed RAPR Checklist
Encl. 3: EDD, one disk

Encl. 2, Completed RAPR Checklist

SRP CHECKLIST:		REMEDIAL ACTION PROGRESS REPORT 2nd Quarter 2003 through 4th Quarter 2008 Site 886 (FTMM-66)		
	N.J.A.C. 7:26E-	**Use this checklist to assure that the remedial action progress report is complete and meets all technical requirements.**	**Included: Yes/No/NA**	**Page #**
	6.6(a)	Have progress reports been submitted as required?	NA	
	6.6(b)1	Is a description of each remedial action included and adequate?	Yes	3-1
	6.6(b)2	Is a discussion of problems and proposal for correction included and adequate?	NA	
	6.6(b)3	Are proposals for deviation from approved WP adequately addressed?	NA	
		6.3(e)3iii If requesting to reduce sampling frequency have the requirements at 6.3(e)3iii and in Appendix C been met?	NA	
	6.6(b)4	Is a revised schedule included and adequate?	Yes	6-2 & App.E
	6.6(b)5	Is the status of permit applications included and adequate?	NA	
	6.6(b)6	Is a list of upcoming remedial actions included and adequate?	Yes	6-2 & App.E
	6.6(b)7	Is the cost of each remedial action adequately documented?	Yes	6-1 & App.E
	6.6(b)8	Is a table of sampling results, summary of data and conclusions included and adequate?	Yes	6-1 & Tables Section
	6.6(b)9	Is information for active GW remediation included and adequate?	NA	
		6.6(b)9i Has a ground water Contour Map Reporting Form (Appendix G) been completed and included?	Yes	Figures Section
	6.6(b)10	Is information for natural GW remediation included and adequate?	Yes	4-1 & 5-1
	6.6(b)11	Is a description of wastes generated included and adequate?	Yes	4-2
	6.6(b)12	Has other important information been included:	NA	
		If not previously provided, has a map of the CEA been included along with a CEA Factsheet from Appendix F?	NA	
		If the RAPR includes a proposal to revise the CEA, has all the necessary information per 6.3 and Appendix F been included?	NA	
		Does the report indicate whether biennial certifications have been submitted for CEAs &/or DERs?	NA

EXECUTIVE SUMMARY

This *Remedial Action Progress Report* (RAPR) documents the quarterly sampling of five monitoring wells and eight recovery wells at Site 886 (FTMM-66) from the 2nd Quarter 2003 through the 4th Quarter 2008 (Rounds 2 through 24) to monitor the progress of the natural attenuation program in reducing contaminant levels in ground water.

Site 886 is located at the Main Post Area of Fort Monmouth, New Jersey (Figure 2-1). Site 886 includes Building 886, a former equipment-storage building, and is located in the south part of the Main Post Area at the intersection of Murphy Road and Lane Avenue, approximately 950 feet south of Husky Brook. A 250,000-gallon aboveground storage tank (AST) for #2 fuel oil was removed from the site in the 1970s. The AST was remotely filled from a railroad siding and connected underground piping which started approximately 200 feet to the West of the AST site at a historic railroad siding. During the removal of a 1,000-gallon #2 fuel underground storage tank (UST) in April 1998, extensive subsurface petroleum contamination was found. On January 11, 1997, New Jersey Department of Environmental Protection (NJDEP) Case #97-1-11-0938-02 was assigned to Site 886.

The Directorate of Public Works (DPW) subsequently conducted a Remedial Investigation (RI) to delineate impacts of petroleum product on soils and ground water. The RI was conducted in two phases, followed by excavation of contaminated soils and confirmation sampling. This work was completed between January 2002 and February 2003. 4,000 tons of fuel-impacted soils were excavated, and a product-recovery system was installed in January 2003 to remove free product from the ground water table. The recovery system included five monitoring wells and eight recovery wells and was first sampled in February 2003. This system is used for long term monitoring, but the amount of recoverable free product has been minimal and the recovery system has not been activated on a full-time basis.

Based on the results of the initial sampling, benzene was identified as a Contaminant of Concern (COC) in ground water. Predictive modeling in the *Remedial Action Report* (RAR) indicated that after source removal, benzene concentrations would degrade naturally to below NJDEP Class II-A Ground Water Quality Standard (GWQS), and the plume would not migrate offsite.

During the current sampling period, benzene was detected above the NJDEP standard of 1.0 µg/L in samples collected at wells 886RW01, 886RW02 and 886RW08 at concentrations ranging from not detected (ND) to 7.95 µg/L. Benzene concentrations have generally decreased with time.

The reduction of benzene concentrations in these wells and the absence of benzene exceeding GWQS in wells downgradient and in the source area confirm that the plume is degrading and not migrating offsite. Benzene concentrations continue to be detected in 886RW01 on the same order of magnitude as the GWQS. Benzene concentrations continue to be detected in 886RW02; however, concentrations have not exceeded the GWQS for the last three years of monitoring. Benzene has not been detected in 886RW08 in the last five years of monitoring.

The RAR prepared by Versar, Inc. (VERSAR) dated January 2006 stated N-Nitrosodiphenylamine as a potential COC based on a concentration of 38.99 µg/L detected in 886MW03 once on February 12, 2003. N-Nitrosodiphenylamine was not detected in 886MW03 since its detection in February 2003 and therefore is no longer a potential COC.

THIS PAGE INTENTIONALLY LEFT BLANK

1.0 INTRODUCTION

A monitored natural attenuation program to remediate benzene at Site 886 is being conducted in accordance with the RAR prepared by VERSAR dated January 2006. Site 886 is located at the Main Post Area of Fort Monmouth, New Jersey (Figure 2-1). The U.S. Army Garrison Fort Monmouth, DPW and Chenega Technology Services Corporation issued the contract under Chenega purchase order number C06-02456 to VEETech, P.C. (VEETech) to prepare this RAPR. This report documents ground water monitoring during the current reporting period of the 2nd Quarter 2003 through the 4th Quarter 2008 (Rounds 2 through 24).

1.1 Objectives

The objective of this RAPR is to document the implementation of the remedial action program performed at Site 886 during the current reporting period of the 2nd Quarter 2003 through the 4th Quarter 2008. Monitored natural attenuation was implemented by the DPW as a Remedial Action (RA). The purpose of the RA was to monitor the contaminant-affected areas at the site to evaluate the effectiveness of natural attenuation to reduce the contaminant concentrations to comply with the NJDEP Class II-A aquifer GWQS. The remedial activities were conducted in accordance with the NJDEP *Technical Requirements for Site Remediation* (September 2, 2008), N.J.A.C. 7:26E *et seq*. and the Site 886 RAR (Appendix A).

The RA and subsequent preparation of this RAPR encompassed the following:

- Conducting quarterly rounds of ground water sampling and documenting the results to evaluate the effectiveness of the RA,
- Comparing the results of the ground water sampling with the NJDEP GWQS,
- Identifying and discussing recommendations with the DPW for the continuation of this RA, and
- Documenting remedial activities as required by the NJDEP *Technical Requirements for Site Remediation*, N.J.A.C. 7:26E *et seq*.

1.2 Report Organization

Section 2.0 discusses the site history and background information for Site 886. Section 3.0 discusses the remedial activities (natural attenuation) conducted at Site 886. Section 4.0 discusses ground water monitoring and sampling activities at the site. Section 5.0 presents the analytical results of the ground water sampling. Section 6.0 discusses the effectiveness of the RA and provides recommendations to the DPW for Site 886. Section 7.0 is the reference section.

THIS PAGE INTENTIONALLY LEFT BLANK

2.0 SITE BACKGROUND

The following sections describe the site background of Site 886. Included is a description of the site location, site history, and background investigations.

2.1 Site Location and Description

Fort Monmouth is located in the central-eastern portion of New Jersey in Monmouth County, approximately 45 miles south of New York City and 70 miles northeast of Philadelphia (Figure 2-1). The U.S. Army Garrison Fort Monmouth incorporates the Main Post and a subpost, the Charles Wood Area. The Main Post is approximately 630 acres and is linked to the State Highway 35. Figure 2-1 shows the location of Site 886. Site 886 includes Building 886 and is located in the south part of the Main Post Area at the intersection of Murphy Road and Lane Avenue, approximately 950 feet south of Husky Brook. A site layout map is provided in Figure 2-2.The environmental setting (regional/local geology and hydrogeology) of the site is described in the RAR prepared by VERSAR, dated January 2006 (Appendix A).

2.2 Site History and Background Investigations

In the early 1990s, the DPW developed an underground storage tank (UST) program for managing approximately 506 USTs located throughout the Fort Monmouth installation (Main Post and Charles Wood areas). This program was created to work toward replacing the use of heating oil as a major energy source with natural gas. The program also included the closure of regulated waste oil and gasoline USTs.

Building 886 was used for equipment storage. A 250,000-gallon above ground storage tank (AST) for #2 fuel oil was removed from the site in the 1970s. During the removal of a 1,000-gallon #2 fuel UST in April 1998, holes were observed in the tank walls and extensive soil and ground water contamination was discovered. Further investigation was conducted to delineate the extent of impact to the site. This was followed by excavation and removal of limited volumes of petroleum impacted soils. The DPW conducted additional Remedial Investigation (RI) to fully delineate the extent of contamination and initiated further remediation. The results of this additional activity were presented in the RAR, summarized in the following section.

2.2.1 Remedial Action Report (RAR), 2006 - VERSAR

VERSAR prepared and submitted a RAR dated January 2006 to Fort Monmouth (Appendix A) that analyzed data collected by the Fort Monmouth DPW RI and documented the remedial activities conducted at the site.

The Phase I RA conducted from January through March 2002 included excavation and off-site disposal of contaminated soils in the areas of the former storage tanks. Excavation and confirmation sampling occurred in several stages. The confirmation sampling indicated that contamination was more extensive and product was observed at the water table in the excavations.

A Phase I RI was conducted from March through June 2002 to define the aerial extent of remaining contamination in soils and ground water in the vicinity of Building 886. This included Geoprobe borings for soil sampling and limited excavation of contaminated soils. 345 subsurface soil samples were collected and analyzed for Total Petroleum Hydrocarbons (TPHC).

27 soil samples from borings that contained TPHC concentrations over 1,000 milligram per kilogram (mg/Kg) were analyzed for Volatile Organic Compounds (VOCs).

Because free product was observed in the excavation, 27 temporary well points were installed. Free hydrocarbon product was observed in 12 of the temporary wells. Ground water samples were collected in June 2002 from two of the impacted wells. Samples were analyzed for VOCs and Semi-Volatile Organic Compounds (SVOCs). VOCs and SVOCs were not detected in either sample exceeding the NJDEP GWQS.

The Phase II RI was conducted in November 2002 and included 31 additional samples from 12 Geoprobe locations to complete the soils delineation. Based on the results of the investigation, additional remedial action was implemented from November 2002 through February 2003. This included the excavation and disposal of over 4,000 tons of hydrocarbon impacted soils that exceeded the NJDEP Residential Direct Contact Soil Cleanup Standard (RDCSCS) for TPHC (10,000 mg/Kg) and post excavation sampling. These soils were removed from an area separate from the UST area. This release may have been associated with the 250,000 gallon AST removed in the 1970s.

A system to recover product from the ground water surface was installed in January 2003. The system included five monitoring wells outside of the source area, eight recovery wells within the source area, and an automated product recovery system.

Initial sampling of the monitoring and recovery wells in February 2003 resulted in detection of benzene above the NJDEP GWQS in three wells (886RW02, 886RW05 and 886RW07) at concentrations ranging from 1.09 to 2.16 micrograms per liter (µg/L). 2-Butanone (methyl ethyl ketone or MEK) was also detected in two recovery wells (886RW01 and 886RW08) at very high concentrations 29,510.7 – 30,039.7 µg/L. The source of the MEK was suspected to be the result of use of pipe joint glue in the recovery system installation. A SVOC, N-Nitrosodiphenylamine was also detected in one well, 886MW03, at a concentration exceeding the GWQS. The source of this compound was not identified, and the distribution did not appear to be extensive. Based on these results, benzene was designated as a COC, and N-Nitrosodiphenylamine was designated as a potential COC pending further analytical results.

Ground water modeling results presented in the RAR (Appendix A) indicated that benzene would not migrate from the source area at Site 886 to a nearby Husky Brook within the time period that it was predicted to degrade below the GWQS. Based on these results and the removal of the contaminant sources, the proposed additional RA was to allow the benzene plume to naturally attenuate until concentrations reduced to comply with the NJDEP Class II-A GWQS. Progress would be confirmed by quarterly monitoring of ground water.

3.0 REMEDIAL ACTIVITIES

An LNAPL (light non-aqueous phase liquid) skimmer system to recover free phase separating hydrocarbon (PSH) product from the ground water surface was installed in January 2003. The system included eight recovery wells within the source area, five monitoring wells outside of the source area, and an automated LNAPL recovery system. The amount of recoverable PSH product has been minimal and the recovery system has not been activated on a full-time basis. The product recovery system was operated by Handex Inc. until March 2004. The system has not been operational since that time.

Manual product gauging has taken place at recovery well 886RW04. Eight recovery events occurred at 886RW04 during the period from April 6, 2005 to September 1, 2005. Two pints of product were removed on April 6, 2005. Six of the following recovery events discovered a trace of product, and measurable product was not found in the final recovery event (September 1, 2005). Table 3-1 summarizes the product recovery measurements.

Sampling results documented in the VERSAR's RAR (January 2006) for Site 886 indicated that the shallow ground water contained the COC benzene at concentrations that exceeded the NJDEP GWQS. The benzene concentrations in ground water were expected to gradually decrease through natural attenuation.

The existing monitoring wells (886MW01 through 886MW05) and recovery wells (886RW01 though 886RW08) were adequately placed to monitor downgradient ground water; therefore, the DPW proposed natural attenuation with LTM as the remediation remedy for Site 886. Ground water samples are collected on a quarterly basis.

THIS PAGE INTENTIONALLY LEFT BLANK

4.0 MONITORING AND SAMPLING ACTIVITIES

As part of the Long Term Monitoring (LTM) program at Site 886, quarterly ground water monitoring continued from the 2nd Quarter 2003 through the 4th Quarter 2008 (Rounds 2 through 24). Ground water samples were collected from five monitoring wells (886MW01, 886MW02, 886MW03, 886MW04, and 886MW05) and eight recovery wells (886RW01, 886RW02, 886RW03, 886RW04, 886RW05, 886RW06, 886RW07, and 886RW08) during twenty-three quarterly sampling events. Laboratory analytical reports for the Site 886 LTM during this reporting period are presented in Appendix B, and the analytical results are presented and discussed in the following Section 5.0 and Tables 5-1 through 5-13 of this RAPR.

Sampling was conducted by the DPW in accordance with the established protocols as described in the *Fort Monmouth Standard Sampling Operating Procedure* (SOP No.: SAM-0205, August 1999, Revision #1 January 2003, Revision #2 September 2004, Revision #3 January 2006, and Revision #4 April 2008, Appendix C) and the *NJDEP Field Sampling Procedures Manual,* August 2005. Ground water samples were analyzed for VOCs, SVOCs, pesticides, polychlorinated biphenyls (PCBs) and Target Analyte List (TAL) metals. Analysis of pesticides/PCBs and Metals was discontinued in November 2004 after approval from NJDEP (Appendix D). Laboratory analyses of the samples were conducted at the Fort Monmouth Environmental Testing Laboratory (FMETL), a New Jersey certified laboratory (Certification No. 13461).

4.1 Ground Water Monitoring

During this reporting period at Site 886 (2nd Quarter 2003 through the 4th Quarter 2008), ground water was encountered at elevations ranging from 7.23 to 14.45 feet above mean sea level (msl). Static depth to water from the top of the well casings were measured at each monitoring well on a quarterly basis except for 886MW05, which was not measured during the 4th Quarter 2004 (Round 8) and the 1st Quarter 2005 (Round 9). Measurements were taken at 886RW01 and 886RW08 on a quarterly basis in 2003. All recovery wells were measured on an annual basis from the 1st Quarter 2004 (Round 5) to the 1st quarter 2006 (Round 13) then quarterly thereafter, with two exceptions. Recovery well 886RW07 was not sampled in the 1st Quarter 2005 (Round 9). Additionally, measurements were not taken at any recovery wells in the 3rd Quarter 2006 (Round 15).

On January 24, 2006 (Round 13) during the regular quarterly sampling event, 0.03 foot of PSH product was observed in recovery well 886RW04. As a result of the product thickness, recovery well 886RW04 was not sampled. Figure 2-2 illustrates the locations of the monitoring wells. Depth to water measurement results are summarized in Table 4-1.

Ground water-elevation contour maps were generated for 15 of 23 rounds of sampling. Contour maps were not constructed for Round 5, Round 9, Round 13, Round 16, Round 17, Round 18, Round 20, and Round 21 due to depth to ground water gauging activities conducted on multiple days. To prevent inconsistency in ground water direction and contour lines, these ground water-elevation contour maps were eliminated from reporting. The contour maps are presented in Figures 4-1 through Figure 4-23 along with the required NJDEP contour map reporting forms.

The contour maps indicate that shallow ground water underlying Site 886 consistently flows to the north-northwest. Significant variations in ground water flow conditions were not observed through the current monitoring period.

4.2 Ground Water Sampling

Quarterly ground water sampling of the five monitoring wells and eight recovery wells was conducted by the DPW. Quality control samples for the monitoring period included 33 method blanks, 31 trip blanks, 31 field blanks, and 31 field duplicate samples.

Sampling equipment was thoroughly decontaminated before and after each use. Following collection, the ground water samples were immediately placed in laboratory-supplied bottle ware. Sample containers were labeled, sealed, packed in ice, and transported to the FMETL under proper chain-of-custody procedures.

Copies of the chain-of-custody forms and the laboratory analytical data sheets are presented in Appendix B. A summary of the ground water sampling activities for the remediation monitoring (Rounds 2 through 24) including round numbers, well IDs, sample IDs, sample locations, collection dates, analytical parameters, and analysis methods is provided in Table 4-2. Figure 2-2 illustrates the locations of the monitoring wells. The analytical results are discussed in Section 5.1.

4.3 Types of Waste Generated and Disposal Methods

The waste types generated by the remedial activities included three-gallon polyethylene pails, polyethylene tubing, Teflon® bailers, mason string, and personal protective equipment (PPE). The pails were recycled, and the other materials were disposed of in accordance with the Fort Monmouth Solid Waste Management Plan.

5.0 SITE ANALYTICAL RESULTS

This section includes a summary discussion of the chemical characterization of Site 886 based on the samples collected and analyzed for the current reporting period, including twenty-three quarterly rounds of ground water monitoring for five monitoring wells (886MW01 through 886MW05) and eight recovery wells (886RW01 through 886RW08).

5.1 Ground Water Sampling Results

Analytical results from each of the five monitoring wells and eight recovery wells on Site 886 for Rounds 2 through 24 are summarized in Tables 5-1 through Table 5-13. Ground water summary tables include detected analytical results for Site 886 and are divided by monitoring well number and sampling date. The characterization of ground water quality at Site 886 contains 23 quarterly ground water sampling events conducted from May 2003 through November 2008. The ground water results are compared to the NJDEP GWQS and are presented in three different tabs reflecting changes to the NJDEP standard. The first set of data is compared against the January 7, 1993 standard; the next is when a standard change occurred on November 7, 2005; followed by another standard change on July 27, 2007.

The results in the ground water summary tables include analyte detections as well as exceedances of the NJDEP GWQS, which are bolded and shaded. VOCs, SVOCs, pesticides/PCBs, and metals are presented as required to summarize results for detected compounds. Detections are presented in the ground water sampling result summary tables as follows:

- Xylenes are reported as total xylenes (the sum of *o*-xylene and *m,p*-xylenes).
- Tentatively Identified Compounds (TICs) are added and reported as a total concentration for the sum of TICs detected for VOCs and SVOCs.
- Duplicate samples are included after the respective primary sample.
- A “J” value is a concentration exceeding the Method Detection Limit (MDL) but less than the Reporting Limit (RL) for VOCs, SVOCs, and pesticides/PCBs.
- Estimated Results “ER” are concentrations exceeding the MDL and less than the RL for metals.
- A “B” value is a compound detected in the sample and its associated blank sample.
- Sample suites that were discontinued are recorded in the footnotes along with a date of NJDEP case manager approval.
- If a particular sample suite or analyte was not detected in a monitoring well, the suite/analyte is not presented in the monitoring well summary table.

<u>VOCs</u>

During twenty-three quarterly sampling events for the current reporting period, eight VOCs were detected in Site 886 ground water samples. One VOC (benzene) was detected at concentrations that exceeded the GWQS. Benzene was detected above GWQS in more than one sample. Seven VOCs (acetone, ethylbenzene, 2-butanone, methyl *tert*-butyl ether, toluene, xylenes, and *cis*-1,2-dichloroethene) were detected below their respective GWQS.

Analytical results for wells sampled during the current reporting period exceeded the NJDEP GWQS for benzene in recovery wells 886RW01, 886RW02, and 886RW08. Benzene has been identified as the Contaminant of Concern (COC).

SVOCs

During the sampling events for the current reporting period, 11 SVOCs were detected in Site 886 ground water samples. One SVOC (bis (2-ethylhexyl) phthalate) was detected at a concentration exceeding its GWQS. Bis (2-ethylhexyl) phthalate was detected in only one ground water sample. 10 SVOCs (2-methylnaphthalene, acenaphthene, dibenzofuran, diethyl phthalate, fluorene, naphthalene, n-nitrosodiphenylamine, phenanthrene, anthracene, and 4-methylphenol) were detected below their respective GWQS.

The concentration of bis (2-ethylhexyl) phthalate exceeded the NJDEP GWQS in monitoring well 886MW04 for only one quarterly ground water monitoring event (Round 20) and is not considered a COC. The remaining SVOCs were detected below their respective GWQS.

Metals

During sampling events taking place up to November 2004, ten metals were detected in Site 886 ground water samples. Four metals (aluminum, arsenic, cadmium, and lead) were detected at concentrations that exceeded their respective GWQS. Samples that exceeded the GWQS did not exceed the Maximum Background Concentration (MBC) for ground water established in the Weston (1995) report.

Table 5-14 summarizes the analytical results which exceeded the GWQS during the current reporting period. Figure 5-1 illustrates the analytical results for benzene on the site layout map.

5.1.1 Contaminants of Concern (COCs)

Benzene was detected in 886RW01 at concentrations ranging from not detected to 7.95 µg/L (Round 2) during the current reporting period. The NJDEP GWQS for benzene is 1 µg/L. Figure 5-2 illustrates the benzene concentration trend over time in recovery well 886RW01, including all quarters of the Long Term Monitoring (LTM) program since May 2003.

Benzene was detected above NJDEP GWQS in 886RW02 at concentrations ranging from not detected to 2.14 µg/L (Round 5). Benzene concentrations in 886RW02 have generally decreased over time and have been below the NJDEP GWQS since January 2005. Figure 5-3 illustrates the benzene concentration trend over time in recovery well 886RW02, including all quarters of the Long Term Monitoring (LTM) program since February 2004.

Benzene was detected above NJDEP GWQS in 886RW08 at concentrations ranging from not detected to 2.13 µg/L (Round 2). Benzene concentrations in 886RW08 have not been detected since October 2003.

N-Nitrosodiphenylamine was not detected in 886MW03 since its detection in February 2003. N-Nitrosodiphenylamine is no longer a potential COC as it has not been detected since that first round of sampling.

5.2 Tentatively Identified Compounds (TICs)

During the reporting period, all of the thirteen wells sampled had VOC TICs detected for at least one sampling event. Twelve of the wells had TIC concentrations below the NJDEP GWQS. 886RW01 had VOC TIC concentrations detected that exceeded the NJDEP GWQS in one round

(Round 19). Round 19 had an individual TIC estimated concentration of 120 µg/L for an unknown TIC and 150 µg/L for 2-methylnaphthalene, which exceeded the individual TIC GWQS of 100 µg/L. The total concentration of 15 TICs for Round 19 was 519 µg/L, which also exceeded the GWQS for total TICs of 500 µg/L. Table 5-15 summarizes the analytical results for the VOC TICs during this reporting period.

During this reporting period, all of the thirteen wells sampled had SVOC TICs detected for at least four sampling events. On five sampling events (Round 3, Round 9, Round 13, Round 18, and Round 21) analytical results indicated concentrations of TICs exceeding the NJDEP GWQS of 100 µg/L for an individual compound or 500 µg/L for total TIC concentrations.

- In Round 3 monitoring well 886MW05 had a total concentration of 722 µg/L for 25 TICs, which exceeded the GWQS of 500 µg/L for total TICs.
- In Round 9 recovery well 886RW04 had a total concentration of 789 µg/L for 25 TICs, which exceeded the GWQS of 500 µg/L for total TICs.
- In Round 13 recovery well 886RW01 had a total concentration of 732 µg/L for 25 TICs, which exceeded the GWQS of 500 µg/L for total TICs.
- In Round 18 monitoring well 886MW04 had an individual TIC estimated concentration of 170 µg/L for 4-hydroxy-4-methyl-2-pentanone, which exceeded the individual TIC GWQS of 100 µg/L.
- In Round 21 recovery well 886RW01 had a total concentration of 516.23 µg/L for 25 TICs, which exceeded the GWQS of 500 µg/L for total TICs.

5.3 Quality Assurance/Quality Control (QA/QC)

To verify the reliability of the analytical results, VEETech reviewed the holding times for each sample and the results of the analyses of 33 method blanks, 31 trip blanks, 31 field blanks, and 31 field duplicate samples for the ground water samples. The discussion below is based on QA/QC for the ground water samples. Samples were analyzed by the FMETL within the prescribed holding time requirements for the analytical methods.

Method Blanks

Laboratory method blanks were prepared by the laboratory for each batch of analyses performed for Site 886. These method blanks consisted of laboratory-grade water that is processed identically to the samples and analyzed with the sample batch. A total of 33 VOC method blanks were analyzed with the Site 886 samples during this reporting period.

Acetone was detected in two method blank samples at concentrations of 2.60 µg/L (Round 17) and 4.57 µg/L (Round 18), below the NJDEP GWQS of 6,000 µg/L for acetone. Acetone is a common laboratory contaminant and detection in the method blank sample is not indicative of a widespread laboratory contamination problem.

Chloroform was detected in two of the method blank samples at concentrations of 4.07 µg/L (Round 4) and 1.30 µg/L (Round 14), below the NJDEP GWQS of 70 µg/L for chloroform. Chloroform is also a common laboratory contaminant, and detection in two of the method blank samples is not indicative of a widespread laboratory contamination problem.

Benzene (the only COC) was not detected in the method blank samples.

Trip Blanks

A total of 31 trip blanks were included as part of the Site 886 sampling program for this reporting period to check for the potential for volatile organics to have been introduced into the samples during the handling process. The trip blanks were prepared by the FMETL and consisted of sample bottles filled with laboratory deionized water. The trip blanks remained with the sample bottles in coolers and were returned to the laboratory for analysis along with the ground water samples.

Chloroform was detected in nine of the trip blanks at concentrations ranging from 0.37 µg/L (Round 17) to 6.31 µg/L (Round 4), below the NJDEP GWQS of 70 µg/L for chloroform.

Acetone was also detected in two of the trip blanks at concentrations of 27.86 µg/L (Round 23) and 5.60 µg/L (Round 24), below the NJDEP GWQS of 6,000 µg/L for acetone.

The detection of chloroform and acetone in trip blanks indicates that sample handling procedures, including sample containers, may have introduced VOC contamination into the sampling and analysis process. However, benzene (the only COC) was not detected in any of the trip blank samples.

Field Blanks

One field blank sample was obtained during each day's sampling activities to check for potential introduction of contaminants from the field sampling and equipment decontamination procedures. A total of 31 field blanks were collected during the Site 886 sampling program during this reporting period. The field blanks were collected by rinsing deionized water, supplied by the laboratory, over the sampling equipment used for daily activities. The water was collected in clean laboratory-supplied containers and submitted for analysis along with the Site 886 ground water samples.

Two VOCs (Chloroform and Acetone) were detected in the Field Blank analyses.

Chloroform was detected in ten field blank samples collected at concentrations ranging from 0.31 µg/L (Round 17) to 6.31 µg/L (Round 4), below the NJDEP GWQS of 70 µg/L.

Acetone was detected in two field blanks at concentrations of 27.79 µg/L (Round 22) and 5.08 µg/L (Round 23), below the NJDEP GWQS of 6,000 µg/L for acetone.

As noted for the trip blanks, these detections indicate that sample handling procedures, including sample containers, may have introduced contamination into the sampling and analysis process. However, benzene (the only COC) was not detected in any of the field blanks.

Duplicate Samples

A total of 31 field duplicate samples were also collected during this reporting period for the Site 886 sampling events to verify the consistency of the entire sampling and analytical procedure. Results from two of the field duplicates collected (Round 21) were not reported in the analytical data report for that quarter. Two field duplicate samples were collected for two days of sampling for Rounds 5, 9, 13, 16, 17, 18, 20, and 21.

A total of 28 sets of duplicate analyses were available for comparison. Two duplicate sets were not analyzed (Round 21). In Round 9 a duplicate (Sample ID # 5000903) had an unknown

original. As a result, these duplicate sets could not be included in the Relative Percent Differences (RPDs) analysis.

The results for all of the duplicate sample analyses were close to those obtained for the primary sample analyses. The RPDs for the duplicate sample analyses ranged from 0.00 percent to 151.07 percent. The average RPD for the total sets of duplicate analyses was 11.41 percent. The duplicate sample analyses indicate a reasonable level of precision relative to typical environmental laboratory analytical result data sets. Table 5-17 summarizes the RPD calculations for duplicate samples collected for ground water.

THIS PAGE INTENTIONALLY LEFT BLANK

6.0 REMEDIAL ACTION PROGRESS

The long-term ground water monitoring results indicate the concentrations of benzene have generally decreased in ground water at Site 886. There is also no indication of plume migration offsite. The LNAPL recovery system discontinued operating in March 2004 due to lack of efficiency in recovering PSH from the Site.

6.1 Cost of Remediation Incurred To Date

The total cost to date for the annual implementation of the remedial actions performed at Site 886 is approximately $137K (Appendix E). This includes the preliminary assessment phase, site investigation, remedial investigation/feasibility study (RI/FS), remedial design (RD), long term monitoring (LTM), and reporting.

6.2 Conclusions

Benzene was detected above the NJDEP GWQS in 886RW01 during the current reporting period. Concentrations ranged from not detected to 7.95 µg/L (Round 2). The NJDEP GWQS for benzene is 1 µg/L. Figure 5-2 illustrates the trend in concentration of benzene relative to the current GWQS in well 886RW01 over time.

Benzene was detected above the NJDEP GWQS in 886RW02 during the current reporting period. Concentrations ranged from not detected to 2.14 µg/L (Round 5). Benzene concentrations have been below the GWQS since 2005. Figure 5-3 illustrates the trend in concentration of benzene relative to the current GWQS in well 886RW02.

Benzene was detected above the NJDEP GWQS in 886RW08 during the current reporting period. Concentrations ranged from not detected to 2.13 µg/L (Round 2). Benzene has not been detected in 886RW08 since 2003.

Benzene was detected below NJDEP GWQS in wells 886MW01 and 886RW05. Benzene was not detected in wells 886MW02, 886MW03, 886MW04, 886MW05, 886RW03, 886RW04, 886RW06, and 886RW07.

The January 2006 RAR submitted to NJDEP stated N-Nitrosodiphenylamine as a potential COC based on a concentration of 38.99 µg/L detected in 886MW03 detected once on February 12, 2003. N-Nitrosodiphenylamine was not detected in 886MW03 since its detection in February 2003. N-Nitrosodiphenylamine is no longer a potential COC as it has not been detected since that first round of sampling.

6.3 Recommendations

VEETech recommends that the DPW continue quarterly ground water sampling and monitoring activities, as concentrations of benzene in ground water (886RW01) continue to exceed NJDEP GWQS. Due to a decrease in detection of the COC (benzene) throughout Site 886, a significant reduction in the sampling program is warranted. Future sampling and analysis recommendations are summarized by well in the following section. Only one SVOC exceedance has been detected in the current reporting period (Round 20). The SVOC has not been detected since this exceedance. Remedial action progress will be monitored and reported to the NJDEP periodically.

During the current reporting period, several wells had VOC TICs and SVOC TICs detected above the NJDEP GWQS of 100 µg/L for an individual compound or 500 µg/L for total TIC

concentrations. These TIC concentrations were not significant to warrant remedial action for TICs. Wells at Site 886 will continue to be monitored quarterly for TICs.

6.3.1 Sampling Program

The existing sampling plan will continue to monitor the site. The following table provides a summary of the current quarterly ground water sampling program at Site 886.

Monitoring Well	Analyzed for	Recommended Future Sampling	Reason
886MW01	VOCs, SVOCs	Continue Sampling	Downgradient Well
886MW02	VOCs, SVOCs	Continue Sampling	Side Gradient Well
886MW03	VOCs, SVOCs	Continue Sampling	Downgradient Well
886MW04	VOCs, SVOCs	Continue Sampling	Upgradient Well
886MW05	VOCs, SVOCs	Continue Sampling	Side Gradient Well
886RW01	VOCs, SVOCs	Continue Sampling	COC exceedances of GWQS for benzene.
886RW02	VOCs, SVOCs	Continue Sampling	COC exceedances of GWQS for benzene and detection of COC throughout the current reporting period.
886RW03	VOCs, SVOCs	Continue Sampling	Downgradient Well
886RW04	VOCs, SVOCs	Continue Sampling	COC not detected.
886RW05	VOCs, SVOCs	Continue Sampling	Downgradient Well
886RW06	VOCs, SVOCs	Continue Sampling	Side Gradient Well
886RW07	VOCs, SVOCs	Continue Sampling	Side Gradient Well
886RW08	VOCs, SVOCs	Continue Sampling	Upgradient Well

6.4 Remedial Action Schedule

The table and Gantt Chart provided in Appendix E is a schedule summary for remedial activities at Site 886 from the Preliminary Assessment phase through the end of this reporting period and estimated into the future. This table/chart includes actual costs and schedule to date and estimated/anticipated costs and schedule projected for future activities.

Contour Map Reporting Form

This reporting form shall accompany each ground water contour map submittal. Use additional sheets as necessary.

Site 886 Figure 4-1 (May 22, 2003)

1. Did any surveyed well casing elevations change from the previous sampling event? Yes___ No_X_. If yes, attach new "Well Certification - Form B – Location Certification" as found in the "Guide for the Submission of Remedial Action Workplans" (NJDEP, March 1995) and identify the reason for the elevation change (damage to casing, installation of recovery system in monitoring well, etc.).

2. Are there any monitor wells in unconfined aquifers in which the water table elevation is higher than the top of the well screen? Yes___ No_X_. If yes, identify these wells.

3. Are there any monitor wells present at the site but omitted from the contour map? Yes_X_ No___. Unless the omission of the well(s) has been previously approved by the Department, justify the omissions.

Recovery wells 886RW02, 886RW03, 886RW04, 886RW05, 886RW06, and 886RW07 are omitted from the contour map, as these recovery wells were not monitored during this quarter.

4. Are there any monitor wells containing separate phase product during this measuring event? Yes___ No_X_. Were any of the monitor wells with separate phase product included in the ground water contour map? Yes___ No___. If yes, show the formula used to correct the water table elevation.

5. Has the ground water flow direction changed more than 45 degrees from the previous ground water contour map? Yes___ No_X_. If yes, discuss the reasons for the change.

NOTE: THIS IS A COURTESY COPY OF THIS RULE. ALL OF THE DEPARTMENT'S RULES ALL COMPILED IN TITLE 7 OF THE NJ ADMINISTRATIVE CODE.

6. Has ground water mounding and/or depressions been identified in the ground water contour map? Yes___ No_X_. Unless the ground water mounds and/or depressions are caused by the ground water remediation system, discuss the reasons for this occurrence.

7. Are all the wells used in the contour map screened in the same water-bearing zone? Yes_X_ No___. If no, justify inclusion of those wells.

8. Were the ground water contours computer generated___, computer aided_X_, or hand-drawn___? If computer aided or generated, identify the interpolation method(s) used.

APPENDIX G
Contour Map Reporting Form

This reporting form shall accompany each ground water contour map submittal. Use additional sheets as necessary.

Site 886 Figure 4-6 (August 4, 2004)

1. Did any surveyed well casing elevations change from the previous sampling event? Yes___ No_X_. If yes, attach new "Well Certification - Form B – Location Certification" as found in the "Guide for the Submission of Remedial Action Workplans" (NJDEP, March 1995) and identify the reason for the elevation change (damage to casing, installation of recovery system in monitoring well, etc.).

2. Are there any monitor wells in unconfined aquifers in which the water table elevation is higher than the top of the well screen? Yes___ No_X_. If yes, identify these wells.

3. Are there any monitor wells present at the site but omitted from the contour map? Yes_X_ No___. Unless the omission of the well(s) has been previously approved by the Department, justify the omissions.

Recovery wells 886RW01, 886RW02, 886RW03, 886RW04, 886RW05, 886RW06, 886RW07 and 886RW08 are omitted from the contour map, as these recovery wells were not monitored during this quarter.

4. Are there any monitor wells containing separate phase product during this measuring event? Yes___ No_X_. Were any of the monitor wells with separate phase product included in the ground water contour map? Yes___ No___. If yes, show the formula used to correct the water table elevation.

5. Has the ground water flow direction changed more than 45 degrees from the previous ground water contour map? Yes___ No_X_. If yes, discuss the reasons for the change.

NOTE: THIS IS A COURTESY COPY OF THIS RULE. ALL OF THE DEPARTMENT'S RULES ALL COMPILED IN TITLE 7 OF THE NJ ADMINISTRATIVE CODE.

6. Has ground water mounding and/or depressions been identified in the ground water contour map? Yes___ No_X_. Unless the ground water mounds and/or depressions are caused by the ground water remediation system, discuss the reasons for this occurrence.

7. Are all the wells used in the contour map screened in the same water-bearing zone? Yes_X_ No___. If no, justify inclusion of those wells.

5. Has the ground water flow direction changed more than 45 degrees from the previous ground water contour map? Yes___ No___. If yes, discuss the reasons for the change. N/A

NOTE: THIS IS A COURTESY COPY OF THIS RULE. ALL OF THE DEPARTMENT'S RULES ALL COMPILED IN TITLE 7 OF THE NJ ADMINISTRATIVE CODE.

6. Has ground water mounding and/or depressions been identified in the ground water contour map? Yes___ No___. Unless the ground water mounds and/or depressions are caused by the ground water remediation system, discuss the reasons for this occurrence.

N/A

7. Are all the wells used in the contour map screened in the same water-bearing zone? Yes_X_ No___. If no, justify inclusion of those wells.

8. Were the ground water contours computer generated___, computer aided___, or hand-drawn___? If computer aided or generated, identify the interpolation method(s) used.

N/A

NOTE: THIS IS A COURTESY COPY OF THIS RULE. ALL OF THE DEPARTMENT'S RULES ALL COMPILED IN TITLE 7 OF THE NJ ADMINISTRATIVE CODE.

APPENDIX G
Contour Map Reporting Form

This reporting form shall accompany each ground water contour map submittal. Use additional sheets as necessary.

Site 886 Figure 4-17 (contour map not constructed)
(April 18 & 19, 2007)

1. Did any surveyed well casing elevations change from the previous sampling event? Yes___ No X. If yes, attach new "Well Certification - Form B – Location Certification" as found in the "Guide for the Submission of Remedial Action Workplans" (NJDEP, March 1995) and identify the reason for the elevation change (damage to casing, installation of recovery system in monitoring well, etc.).

2. Are there any monitor wells in unconfined aquifers in which the water table elevation is higher than the top of the well screen? Yes___ No X. If yes, identify these wells.

3. Are there any monitor wells present at the site but omitted from the contour map? Yes X No___. Unless the omission of the well(s) has been previously approved by the Department, justify the omissions.

Due to the ground water gauging event occurred on two separate days, this contour map is omitted.

4. Are there any monitor wells containing separate phase product during this measuring event? Yes___ No X. Were any of the monitor wells with separate phase product included in the ground water contour map? Yes___ No___. If yes, show the formula used to correct the water table elevation.

5. Has the ground water flow direction changed more than 45 degrees from the previous ground water contour map? Yes___ No___. If yes, discuss the reasons for the change. N/A

NOTE: THIS IS A COURTESY COPY OF THIS RULE. ALL OF THE DEPARTMENT'S RULES ALL COMPILED IN TITLE 7 OF THE NJ ADMINISTRATIVE CODE.

6. Has ground water mounding and/or depressions been identified in the ground water contour map? Yes___ No___. Unless the ground water mounds and/or depressions are caused by the ground water remediation system, discuss the reasons for this occurrence.

N/A

7. Are all the wells used in the contour map screened in the same water-bearing zone? Yes_X_ No___. If no, justify inclusion of those wells.

8. Were the ground water contours computer generated___, computer aided___, or hand-drawn___? If computer aided or generated, identify the interpolation method(s) used.

N/A

NOTE: THIS IS A COURTESY COPY OF THIS RULE. ALL OF THE DEPARTMENT'S RULES ALL COMPILED IN TITLE 7 OF THE NJ ADMINISTRATIVE CODE.

APPENDIX G
Contour Map Reporting Form

This reporting form shall accompany each ground water contour map submittal. Use additional sheets as necessary.

Site 886 Figure 4-18 (August 2, 2007)

1. Did any surveyed well casing elevations change from the previous sampling event? Yes___ No_X_. If yes, attach new "Well Certification - Form B – Location Certification" as found in the "Guide for the Submission of Remedial Action Workplans" (NJDEP, March 1995) and identify the reason for the elevation change (damage to casing, installation of recovery system in monitoring well, etc.).

2. Are there any monitor wells in unconfined aquifers in which the water table elevation is higher than the top of the well screen? Yes___ No_X_. If yes, identify these wells.

3. Are there any monitor wells present at the site but omitted from the contour map? Yes___ No_X_. Unless the omission of the well(s) has been previously approved by the Department, justify the omissions.

4. Are there any monitor wells containing separate phase product during this measuring event? Yes___ No_X_. Were any of the monitor wells with separate phase product included in the ground water contour map? Yes___ No___. If yes, show the formula used to correct the water table elevation.

5. Has the ground water flow direction changed more than 45 degrees from the previous ground water contour map? Yes___ No_X_. If yes, discuss the reasons for the change.

NOTE: THIS IS A COURTESY COPY OF THIS RULE. ALL OF THE DEPARTMENT'S RULES ALL COMPILED IN TITLE 7 OF THE NJ ADMINISTRATIVE CODE.

6. Has ground water mounding and/or depressions been identified in the ground water contour map? Yes___ No_X_. Unless the ground water mounds and/or depressions are caused by the ground water remediation system, discuss the reasons for this occurrence.

7. Are all the wells used in the contour map screened in the same water-bearing zone? Yes_X_ No___. If no, justify inclusion of those wells.

8. Were the ground water contours computer generated___, computer aided_X_, or hand-drawn___? If computer aided or generated, identify the interpolation method(s) used.

Notes:

** - NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (January 7, 1993)

B-Compound detected in the sample and its associated blank sample
ND- Analyte Not Detected in sample.
NA-Not Analyzed
NS- Not Sampled.
NLE-No Limit Established
ER-Estimated Result
J-Estimated Concentration observed greater than the MDL and less than the RL
* TICs = Tentatively Identified Compunds, can not exceed 500 ppb for VOCs and SVOCs. No individual compound can exceed 100 ppb.
Total xylenes=∑ of *o* -xylene and *m,p* -xylene.
Sampling for Metals and PCBs/Pesticides were discontinued as per NJDEP approval letter dated November 2004.

ER-Estimated Result
J-Estimated Concentration observed greater than the MDL and less than the RL
* TICs = Tentatively Identified Compounds, cannot exceed 500 ppb for VOCs and
Total xylenes= ∑ of *o* -xylene and *m,p* -xylene.
Sampling for Metals and PCBs/Pesticides were discontinued as per NJDEP approval

EXECUTIVE SUMMARY

VERSAR, Inc. (Versar) has been contracted by the United States (U.S.) Army Garrison, Fort Monmouth (Fort Monmouth), Directorate of Public Works (DPW), Fort Monmouth, New Jersey to prepare a Remedial Action Report (RAR) to document soil and groundwater conditions at Building 886 located in the Main Post Area of Fort Monmouth, New Jersey. This report addresses the remedial activities performed from January 2002 through February 2003.

Building 886 is located in the south part of the Main Post Area of Fort Monmouth, at the intersection of Murphy Road and Lane Avenue. Building 886 is located approximately 950 feet south of Husky Brook.

Building 886 was used by Fort Monmouth for equipment storage. A former above-ground storage tank (AST) was located adjacent to Building 886. The AST had a storage capacity of 250,000 gallons and stored #2 fuel oil. The AST has been identified on base maps dating back to 1956. Fort Monmouth had the AST removed during the 1970's.

A 1,000-gallon underground storage tank (UST) was also located adjacent to Building 886 and supplied #2 fuel oil for heating. The UST was removed in April 1998 by TECOM-Vinnell Services (TVS) during which time several holes were documented in the UST, a sheen was present on the groundwater within the excavation, and evidence of potentially contaminated soils was observed.

Extensive contamination was discovered during the removal of the Building 886 storage tanks, therefore requiring remedial investigation (RI) activities to better delineate the presence of soil and groundwater contamination. RI activities included soil and groundwater sampling. Remedial action (RA) activities included the excavation of contaminated soil, the collection of post-excavation samples and the installation of a groundwater treatment system.

The first phase of remedial activities that was conducted including soil sampling to determine if contamination remained. Phase 1 RA activities were conducted until soil and groundwater contamination were discovered. Following this discovery, RI soil sampling was conducted to determine the necessity of remedial action. RI soil sampling was conducted at 48 geoprobe soil boring locations of the removed tanks at Building 886. A total of 345 soil samples were collected at various depths and were analyzed for Total Petroleum Hydrocarbons (TPH), and an additional 27 soil samples were collected from boring locations containing soil exceeding 1,000 ppm TPH and were analyzed for Volatile Organic Compounds (VOCs). TPH was detected in 128 of the 345 soil samples at concentrations below the New Jersey Department of Environmental Protection (NJDEP) criteria. Eleven samples contained soils which exceeded the NJDEP Residential Direct Contact Soil Cleanup Criteria (RDCSCC) for TPH. No VOCs were detected in the soil samples above the RDCSCC.

Following the Phase 1 RI, 27 temporary piezometer points were installed at Building 886 for depth to water measurements. Freephase petroleum hydrocarbons (product) were observed which prompted the collection of two groundwater samples from two of the geoprobe soil boring locations. The soil samples were analyzed for VOCs and Semi-Volatile Organic Compounds (SVOCs). No VOCs or SVOCs were detected in site groundwater.

A second phase of RI sampling was conducted to further delineate soil contamination at Building 886. A total of 31 soil samples were collected at various depths from 12 different geoprobe locations. The soil samples were analyzed for TPH in all 31 samples, seven of which were also analyzed for VOCs based on TPH results exceeding 1,000 ppm. TPH was detected in 12 of the 31 soil samples at concentrations below the NJDEP RDCSCC. Two samples contained soils which exceeded the RDCSCC for TPH. No VOCs were detected in the soil samples at concentrations above the RDCSCC.

Based on the results of the Phase 1 and Phase 2 RI activities, a remedial design consisting of the excavation and removal of contaminated soil exceeding the RDCSCC for TPH was conducted. Approximately 4,000 tons of soil with contamination in excess of the NJDEP RDCSCC was excavated and removed from the site. Phase 2 post-excavation RA soil samples were collected to determine if contamination remained. A total of 60 post-excavation soil samples were collected from within the excavation areas at Building 886.

During the post-excavation RA soil sampling events (Phase 1 and Phase 2), a total of 83 soil samples were collected and analyzed for TPH. Out of the 43 soil samples where TPH was detected, four samples contained TPH concentrations exceeding the RDCSCC. Twenty-two soil samples which were collected from boring locations containing soil exceeding 1,000 ppm TPH were also analyzed for VOCs. No VOCs were detected in the soil samples at concentrations above the RDCSCC.

Based on the results of the geoprobe groundwater investigation, a groundwater treatment system for the recovery of free-phase petroleum hydrocarbons consisting of an automated product recovery system and 13 groundwater monitoring and recovery wells was installed. A total of 15 groundwater samples were collected from 13 monitoring wells to establish the areal extent of petroleum hydrocarbon impacts to groundwater. The groundwater samples were analyzed for TPH, VOCs, SVOCs, pesticides and polychlorinated biphenyls (PCBs) and Target Analyte List (TAL) metals. TPH was detected in 12 samples; however there is no NJDEP Ground Water Quality Criteria (GWQC) for TPH. A total of nine VOCs were detected in site groundwater, two of which were detected at concentrations that exceed their respective GWQC. A total of ten SVOCs were detected in site groundwater, one of which was detected at a concentration that exceeded its GWQC. Three pesticides were detected at concentrations below their respective GWQC. A total of 20 metals were detected in site groundwater. Five metals were detected at concentrations that exceed their respective GWQC, while the remaining 15 metals were detected below their respective GWQC.

Based on the magnitude of their exceedences, the frequency of their occurrences and their wide-ranging results, TPH in soil and benzene in groundwater are identified as contaminants of concern (COCs) at Building 886. Methyl ethyl ketone and N-Nitrosodiphenylamine will remain potential COCs at Building 886 until further sampling can better assess the occurrence of these contaminants at the site.

Continuation of the groundwater monitoring program, including quarterly groundwater well monitoring for VOCs and SVOCs is recommended at Building 886.

1.0 INTRODUCTION

Versar has been contracted by the U.S. Army Garrison, Fort Monmouth, DPW, Fort Monmouth, New Jersey, to prepare an RAR for contaminated soils and contaminated groundwater at Building 886 located in the Main Post Area of Fort Monmouth. This report addresses the remedial activities performed from January 2002 through February 2003.

1.1 Objectives

The objective of this RAR is to present the site remedial action process performed at the contaminated areas at Building 886, along with the results of the RA activities conducted at these sites. The purpose of the RA was to excavate and dispose of contaminated soils and remediate contaminated groundwater in these areas. The remedial actions were conducted in accordance with NJDEP *Technical Requirements for Site Remediation* (July 1999), NJAC 7:26E, et seq.

The remedial actions encompassed the following:

- Excavating contaminated soils in areas identified through RI sampling conducted between March 2002 and June 2002 and installing a groundwater treatment system (product recovery);
- Conducting post-excavation soil sampling to evaluate the effectiveness of the RA;
- Conducting groundwater sampling from surrounding wells to evaluate the areal extent of petroleum hydrocarbons;
- Comparing the results of the sampling with the NJDEP RDCSCC;
- Disposal of contaminated soil (conducted by Fort Monmouth); and
- Documentation of activities as required by the NJDEP *Technical Requirements for Site Remediation* (July 1999), NJAC 7:26E, et seq.

1.2 Report Organization

This report is organized to minimize repetition. **Section 2.0** provides background information and a general description of both Building 886 and the Main Post Area of Fort Monmouth. **Section 3.0** describes and summarizes the field activities conducted at Building 886, including RA soil sampling, RI soil sampling, geoprobe groundwater sampling, and groundwater sampling from monitoring wells. The results of the post-excavation RA soil sampling and the groundwater monitoring well sampling at Building 886 is presented in **Section 4.0**. **Section 5.0** discusses the quality control methodology used to verify the reliability of the analytical results. Conclusions and recommendations for Building 886 are presented in **Section 6.0**.

2.0 SITE DESCRIPTION AND BACKGROUND

The following sections describe Building 886 background and environmental setting of the area surrounding Fort Monmouth and Building 886. Included is a description of location, background, current conditions and environmental setting at Building 886.

2.1 Site Location and Description

Fort Monmouth is located in the central-eastern portion of New Jersey in Monmouth County, approximately 45 miles south of New York City and 70 miles northeast of Philadelphia (**Figure 2-1**). In addition to the Main Post, the installation includes two subposts, the Charles Wood Area and the Evans Area. The Main Post encompasses approximately 630 acres and is bounded by State Highway 35, Parkers Creek, Lafetra Brook, the New Jersey Transit Railroad and a residential area to the south. The post was established in 1918 during World War I (WWI) as an Army Signal Corps training center. The Main Post currently provides administrative, training, and housing support functions, as well as providing many of the community facilities for Fort Monmouth. The primary mission of Fort Monmouth is to provide command, administrative, and logistical support for Headquarters, U.S. Army Communications and Electronics Command (CECOM). CECOM is a major subordinate command of the U.S. Army Materiel Command (AMC) and is the host tenant at Fort Monmouth.

Building 886 is located in the south part of the Main Post area of Fort Monmouth, at the intersection of Murphy Road and Lane Avenue (**Figure 2-2**). Building 886 is located approximately 950 feet south of Husky Brook.

Building 886 was used by Fort Monmouth for equipment storage. A former above-ground storage tank (AST) was located adjacent to Building 886. The AST had a storage capacity of 250,000 gallons and stored #2 fuel oil. The AST has been identified on base maps dating back to 1956. Fort Monmouth had the AST removed during the 1970's. A 1,000-gallon underground storage tank (UST) was also located adjacent to Building 886 and supplied #2 fuel oil for heating. The UST was removed in April 1998 by TECOM-Vinnell Services (TVS), during which soil contamination was identified at the site. Subsequently, remedial actions began to excavate contaminated soils and RIs were initiated to determine the extent of environmental impacts in the area. The remedial actions and investigations are the subject of this report.

2.2 Current Conditions

The site currently consists of Building 886 and lawn area. Due to security reasons, site photographs were not taken during the Building 886 walk-through.

2.3 Environmental Setting

The following is a description of the geological/hydrogeological setting of the area surrounding Building 886. Included is a description of the regional geology of the area surrounding Fort Monmouth, as well as descriptions of the local geology and hydrogeology of the Main Post.

2.3.1 Regional and Local Geology

Monmouth County lies within the New Jersey Section of the Atlantic Coastal Plain physiographic province. Building 886 is located in what may be referred to as the Outer Coastal Plain subprovince, or the Outer Lowlands. The geologic map of New Jersey is provided as **Figure 2-3**.

In general, New Jersey Coastal Plain formations consist of a seaward-dipping wedge of unconsolidated deposits of clay, silt, sand and gravel. These formations typically strike northeast-southwest with a dip ranging from 10-60 feet per mile and were deposited on Precambrian and lower Paleozoic rocks (Zapecza, 1989). These sediments, predominantly derived from deltaic, shallow marine and continental shelf environments, date from Cretaceous through the Quaternary Periods. The mineralogy ranges from quartz to glauconite.

The formations record several major transgressive/regressive cycles and contain units, which are generally thicker to the southeast and reflect a deeper water environment. More than 20 regional geologic units are present within the sediments of the Coastal Plain. Regressive, upward coarsening deposits are usually aquifers (e.g., Englishtown and Kirkwood Formations, and the Cohansey Sand), while the transgressive deposits act as confining units (e.g., the Merchantville, Marshalltown and Navesink Formations). The individual thickness for these units varies greatly (e.g., from several feet to several hundred feet). The Coastal Plain deposits thicken to the southeast from the Fall Line (e.g., a boundary zone between older, resistant rocks and younger, softer plain sediments) to greater than 6,500 feet in Cape May County (Zapecza, 1989).

Based on the regional geologic map (Jablonski, 1968), the Cretaceous age Red Bank and Tinton Sands outcrop at the Main Post area. The Red Bank Sand conformably overlies the Navesink Formation and dips to the southeast at 35 feet per mile. The upper member (Shrewsbury) of the Red Bank Sand is a yellowish-gray to reddish brown clayey, medium-to-coarse-grained sand that contains abundant rock fragments, minor mica and glauconite (Jablonski). The lower member (Sandy Hook) is a dark gray to black, medium-to-fine grained sand with abundant clay, mica and glauconite.

The Tinton Sand conformably overlies the Red Bank Sand and ranges from a clayey medium to very coarse-grained feldspathic-quartz and glauconite-sand to a glauconitic-coarse sand. The color varies from dark yellowish orange or light brown to moderate brown and from light olive to grayish olive. Glauconite may constitute 60-80 percent of the sand fraction in the upper part of the unit. The upper part of the Tinton Sand is often highly oxidized and iron oxide encrusted (Minard, 1969). Groundwater occurs beneath the site at a depth of approximately 5-8 feet bgs.

The Kirkwood Formation (part of the Kirkwood-Cohansey system) crops out southeast of the Main Post and dips to the southeast at a slope of 20 feet per mile (Jablonski, 1968). The Kirkwood Formation consists of alternating layers of sand and clay. The upper unit is a light gray to yellowish-brown, fine-grained quartz sand with quartz nodules and small pebbles. The lower unit is a brown silt in Monmouth County (Jablonski, 1968).

2.3.2 Hydrogeology

Fort Monmouth lies in the Atlantic and Eastern Gulf Coastal Plain groundwater region (Meisler et al., 1988). This groundwater region is underlain by undeformed, unconsolidated to semi-consolidated sedimentary deposits. The chemistry of the water near the surface is variable with low dissolved solids and high iron concentrations. The water chemistry in areas underlain by glauconitic sediments (such as Red Bank, Tinton and Hornerstown Sands) is dominated by calcium, magnesium, manganese, aluminum and iron. The sediments in the area of Fort Monmouth were deposited in fluvial-deltaic to near shore environments.

The water table aquifer in the Main Post Area is identified as part of the "Navesink-Hornerstown Confining Units," or minor aquifers. The minor aquifers include the Navesink formation, Red Bank Sand, Tinton Sand, Hornerstown Sand, Vincentown Formation, Manasquan Formation, Shark River Formation, Piney Point Formation and the basal clay of the Kirkwood Formation. These geologic formations comprise a "Composite Confining Bed" for the Wenonah Mount Laurel Aquifer (Zapecza, 1989).

Wells installed in the Red Bank and Tinton Sands produce 2-25 gallons per minute (gpm) (Jablonski, 1968). Groundwater is typically encountered at the Main Post and in the surrounding areas at shallow depths below ground surface (2-9 feet bgs). Water in the surficial aquifer generally flows east toward the Atlantic Ocean.

As presented in **Figure 2-4**, Fort Monmouth is located within the outcrop area of the "Navesink-Hornerstown Confining Unit" (Martin, 1998), which also includes the Red Bank Sand, Tinton Sand, Vincentown Formation, Manasquan Formation, Shark River Formation, Piney Point Formation and the basal clay of the Kirkwood Formation. The Navesink-Hornerstown Confining Unit is approximately 125 feet thick at Building 886.

Based on a review of the NJDEP Ground Water Quality Standards (GWQS) (NJAC 7:9-6), January 7, 1993, Versar has determined that the site is underlain by a Class III-A aquifer. A formal presentation of this finding was made to the NJDEP on April 17, 2001. The primary designated use for Class III-A groundwater is the release or transmittal of groundwater to adjacent classification areas and surface water, as relevant. Secondary designated uses in Class III-A include any reasonable use.

Shallow groundwater may be locally influenced within the Main Post Area by the following factors:

- Tidal influence (based on proximity to the Atlantic Ocean, rivers and tributaries);
- Topography;
- Nature of the fill material within the Main Post Area ;
- Presence of clay and silt lenses in the natural overburden deposits;
- Local groundwater recharge areas (e.g., streams, lakes); and
- Roadways, utility conduits and stormwater culverts.

Due to the fluvial nature of the overburden deposits (e.g., sand and clay lenses), shallow groundwater flow direction is best determined on a case-by-case basis.

2.3.3 Soils

According to the U.S. Department of Agriculture (USDA), Soil Conservation Service, Monmouth County Soil Survey (April 1989), the majority of the Main Post is covered by urban land (**Figure 2-5**). The soil survey describes urban land as areas where concrete, asphalt, buildings, shopping centers, airports or other impervious surfaces cover 80 percent or more of the surface. In addition, the survey indicated that the natural subsurface soils have largely been replaced with artificial or foreign fill materials (developed land with disturbed soils).

The following soil series and classification units are mapped in the Main Post Area:

- DoB Downer sandy loam (with 2 to 5 percent slopes)
- FrB Freehold sandy loam (with 2 to 5 percent slopes)
- FUB Freehold sandy loam/urban land complex (with 0-10 percent slopes)
- HV Humaquepts, frequently flooded
- KvA Kresson loam (with 0-5 percent slopes)
- UA Udorthents, smoothed
- UD Udorthents – urban land complex (with 0-3 percent slopes)

The Downer series soils are well-drained soils that are found on uplands and terraces. The soils are formed in acid, silty coastal plain sediments. The Freehold soils are also well drained and are formed in acid, loamy, coastal plain sediments that, by volume, are 1-10 percent glauconite and are found on uplands. The Humaquepts soils are somewhat poorly- to very poorly- drained soils that are formed in stratified, sandy, or loamy sediments of fluvial origins. The Humaquepts soils are located on the floodplain and are subject to flooding several times each year. The Kresson loam is a nearly level to gently sloping soil and is somewhat poorly drained. The soil is found on low divides and in depressions. The Udorthents soils have been altered by excavation or filling activities. In filled areas, these soils consist of loamy material that is more than 20 inches thick. The filled areas include floodplain, tidal marshes and areas with moderately, well drained to very poorly drained soils. Some Udorthent soils contain concrete, asphalt, metal and glass. Soils at Building 886 are classified as Udorthents – urban land complex (with 0-3 percent slopes) (**Figure 2.5**).

Monitoring well records (**Appendix A**) installed at Building 886 describe the soils to consist of natural soil consisting of brown fine to coarse sand with traces of silt and clay.

2.3.4 Topography and Surface Drainage

Over the last 80 years, the natural topography of Fort Monmouth has been altered by excavation and filling activities conducted by the military. The land surface at the Main Post is relatively flat and ranges in elevation from approximately 4 feet above mean sea level (amsl) in the east at Oceanport Creek to 32 feet amsl at the western end of the post, near Highway 35. The eastern half of the post is generally 10 feet above amsl in elevation.

Surface water runoff from the western part of the Main Post flows into the Lafetra Creek to the north or into the Mill Creek to the south. The USGS topographic map (**Figure 2-1**) shows the Lafetra Creek as Parkers Creek Branch and Mill Creek as Wampum. Both Mill Creek and Lafetra Creek originate off-post. Mill Creek is channelized and flows along the southern boundary of the Main Post, turning north just past the Auto Craft Shop. Lafetra Creek forms the northern boundary of the Main Post and joins Mill Creek to form Parkers Creek. Parkers Creek flows eastward along the northern boundary and joins Oceanport Creek east of the post. Most of Parkers Creek, Lafetra Creek and Mill Creek are tidally influenced.

The U.S. Fish and Wildlife Service (FWS) National Wetland Inventory Long Branch quadrangle maps indicate the presence of wetlands at the Main Post. Parkers Creek and Oceanport Creek are classified as estuarine intertidal aquatic beds. The area of Parkers Creek and the part of Oceanport Creek/Husky Brook are classified as estuarine intertidal emergent wetlands. Lafetra Creek and Mill Creek are classified as riverine lower perennial open water/unknown bottom.

Building 866 is located approximately 950 feet south of Husky Brook, which empties to the east into Oceanport Creek. The USGS topographic map (**Figure 2-1**) shows that the land surface of the site is relatively flat at an elevation of less than 20 feet amsl. Surface water runoff from Building 886 is likely northward into Husky Brook.

3.0 REMEDIAL INVESTIGATION AND REMEDIAL ACTION ACTIVITIES

Fort Monmouth DPW has conducted RI and RA activities in the vicinity of Building 886. Underground and above-ground storage tanks were once present at Building 886 and have since been removed from the area. Extensive contamination was discovered during the removal of the Building 886 storage tanks and associated contaminated soil, prompting more extensive excavation in an effort to find the outer edge of contamination. Once the excavation became too large, post-excavation samples were taken to confirm that this section was successfully remediated, and then the excavation was backfilled (Phase 1 RA). Subsequently, RI activities were initiated and performed to better delineate the presence of soil and groundwater contamination. RI activities included soil and groundwater sampling. Phase 2 RA activities included the excavation of contaminated soil at a location separate from the Phase 1 RA excavation, the collection of post-excavation samples and the installation of a groundwater treatment system. A photographic log is presented in **Appendix B**. These activities were managed by the Fort Monmouth DPW and performed by TVS and Handex. The details of RI and RA activities that occurred at Building 886 are described in the following sections.

3.1 Phase 1 RA Soil Activities

The first phase of RA activities was conducted from January 2002 to March 2002, which included excavation and disposal of contaminated soil in the area of the former Building 886 storage tanks. Following excavation activities, post-excavation samples were collected to determine if contamination remained. If contamination remained, then further excavation activities were conducted, followed by the collection of another round of post-excavation samples. A total of 23 post-excavation soil samples, including seven duplicate samples, were collected from within the excavation areas at Building 886. The locations of each Phase 1 soil sample are shown on **Figure 3-1**.

TVS personnel conducted the sampling using direct-push technology. All down-hole sampling equipment was decontaminated prior to use and between each boring. The samples were placed in laboratory-supplied bottles and placed on ice upon collection to ensure samples were kept below 4° C. The soil samples were analyzed by the Fort Monmouth Environmental Testing Laboratory (FMETL) for TPH in all 23 samples. A summary of the soil sampling activities, including rounds, well IDs, sample IDs, sample locations, collection/analysis date, analytical parameters and analysis method, is provided in **Table 3-1**. Copies of the soil sampling chain-of-custody forms and laboratory data sheets are presented in **Appendix C**. The results of the Phase 1 RA soil sampling are presented and discussed in **Section 4.1**.

Phase 1 RA activities were conducted until the excavation became too large and soil and groundwater contamination were discovered. Following this discovery, RI sampling was conducted on both the soil and the groundwater.

3.2 Phase 1 RI Soil Sampling

In order to determine the extent of environmental impacts in the area of Building 886, a site investigation was initiated in March 2002. RI soil sampling was conducted at each

boring to determine the necessity of remedial action. RI activities at Building 886 involved the collection of soil and groundwater samples.

From March 2002 through June 2002, a total of 345 soil samples, including 11 duplicate samples, were collected from the 48 geoprobe soil boring locations of the removed tanks at Building 886. Soil samples were collected at the following depth intervals: 0-6", 24", 48", 72", 96", 120" and 144" below ground surface (bgs). The locations of each Phase 1 soil boring are shown in **Figure 3-2**. An additional 27 soil samples (including three duplicates) were collected from boring locations containing soil exceeding 1,000 ppm TPH and were analyzed for VOCs.

TVS personnel conducted the sampling using direct-push technology. All down-hole sampling equipment was decontaminated prior to use and between each boring. The samples were placed in laboratory-supplied bottles and placed on ice upon collection to ensure samples were kept below 4° C. The soil samples were analyzed by the FMETL for TPH in all 345 samples and VOCs in the additional 18 samples. A summary of the soil sampling activities, including rounds, well IDs, sample IDs, sample locations, collection/analysis date, analytical parameters and analysis method, is provided in **Table 3-2**. Copies of the groundwater sampling chain-of-custody forms and laboratory data sheets are presented in **Appendix D**. The results of the Phase 1 RI soil sampling are presented and discussed in **Section 4.2**.

3.3 Geoprobe RI Groundwater Sampling

Following the Phase 1 RI, 27 temporary piezometer points were installed for depth to water measurements. Freephase petroleum hydrocarbons (product) were observed in 12 of the piezometers at a thickness ranging from 1/16 to 5-inches. On June 27, 2002, two groundwater samples were collected from two of the geoprobe soil boring locations at Building 886. Both samples were collected from a depth of 12-16 feet bgs. The 27 geoprobe boring locations and phase measurements are shown in **Figure 3-3.** Product recovery measurements are provided in **Table 3-3**.

TVS personnel conducted the sampling using direct-push technology. All down-hole sampling equipment was decontaminated prior to use and between each boring. The samples were placed in laboratory-supplied bottles and placed on ice upon collection to ensure samples were kept below 4° C. The soil samples were analyzed by the FMETL for VOCs and SVOCs in both samples. A summary of the groundwater geoprobe sampling activities, including rounds, well IDs, sample IDs, sample locations, collection/analysis date, analytical parameters and analysis method, is provided in **Table 3-4**. Copies of the groundwater sampling chain-of-custody forms and laboratory data sheets are presented in **Appendix E**.

During the geoprobe groundwater sampling, no VOCs or SVOCs were detected in site groundwater. The results of the analysis are presented in detail in **Table 3-5**.

Based on the results of the investigation, a remedial design consisting of the recovery of free-phase petroleum hydrocarbons was initiated. The implementation of a groundwater treatment system at Building 886 is discussed in **Section 3.6**.

3.4 Phase 2 RI Soil Sampling

A second phase of RI sampling was conducted to further delineate soil contamination at Building 886. Phase 2 soil RI sampling was conducted from November 7 through November 26, 2002. A total of 31 soil samples, including one duplicate sample, were collected from 12 different geoprobe locations throughout the area around Building 886. Soil samples were collected at various depth intervals ranging from 6-12 feet bgs. The locations of the Phase 2 soil borings are shown in **Figure 3-4**.

TVS personnel conducted the sampling using direct-push technology. All down-hole sampling equipment was decontaminated prior to use and between each boring. The samples were placed in laboratory-supplied bottles and placed on ice upon collection to ensure samples were kept below 4° C. The soil samples were analyzed by the FMETL for TPH in all 31 samples. Seven of the 31 soil samples which were collected from boring locations containing soil exceeding 1,000 ppm TPH were also analyzed for VOCs. A summary of the soil sampling activities, including rounds, well IDs, sample IDs, sample locations, collection/analysis date, analytical parameters and analysis method, is provided in **Table 3-6**. Copies of the groundwater sampling chain-of-custody forms and laboratory data sheets are presented in **Appendix D**. The results of the Phase 2 RI soil sampling are presented and discussed in **Section 4.3**.

3.5 Phase 2 RA Post-Excavation Soil Activities

Based on the results of the Phase 1 and Phase 2 RI activities, an RA consisting of the excavation and removal of contaminated soil (from an area different from the Phase 1 RA excavation area) exceeding the NJDEP RDCSCC for TPH was conducted from November 2002 through February 2003. A total of approximately 4,000 tons of soil with contamination in excess of the NJDEP RDCSCC was excavated and removed from the site. Following excavation activities, post-excavation samples were collected to determine if contamination remained. A total of 60 post-excavation soil samples, including seven duplicate samples, were collected from within the excavation areas at Building 886. The locations of each Phase 2 soil sample are shown in **Figure 3-5**.

The samples were placed in laboratory-supplied bottles and placed on ice upon collection to ensure samples were kept below 4° C. The sample analysis was performed by the FMETL for TPH in all 60 samples. Twenty-two out of the 60 soil samples which were collected from boring locations containing soil exceeding 1,000 ppm and/or exceeding 10,000 mg/kg were also analyzed for VOCs. A summary of the groundwater sampling activities, including rounds, well IDs, sample IDs, sample locations, collection/analysis date, analytical parameters and analysis method, is provided in **Table 3-7**. Copies of the soil sampling chain-of-custody forms and laboratory data sheets are presented in **Appendix C**. The results of the Phase 2 RA soil sampling are presented and discussed below in **Section 4.1**.

3.6 Groundwater Treatment System

Based on the results of the geoprobe groundwater investigation, a remedial design consisting of the recovery of free-phase petroleum hydrocarbons was initiated. In January 2003, Handex was contracted for the installation of a groundwater treatment system consisting of groundwater monitoring and recovery wells and air driven product recovery pumps. A total of 13 groundwater monitoring and recovery wells (886MW01, 886MW02, 886MW03, 886MW04, 886MW05, 886RW01, 886RW02, 886RW03, 886RW04, 886RW05, 886RW06, 886RW07 and 886RW08) were installed by at Building 886 to establish the areal extent of petroleum hydrocarbon impacts to groundwater and serve as sentinel wells. The locations of each groundwater monitoring well are shown in **Figure 3-6**. Monitoring well records and permits are provided in **Appendix A**.

The groundwater treatment system included an automated product recovery system (Clean Environmental Equipment, Model GNE/200/SOS) which would remove free-floating hydrocarbon down to a sheen (≤ 0.01 in.) from depths of 200 feet in monitoring wells. The pump would draw product from the skimmer and push it to the surface into a surface-mounted holding tank within a system shed, located on the west side of Building 866 as shown on the As-Built Site Plan included in **Appendix A**. The system specifications and the operations and maintenance manual are included in **Appendix A**.

Since installation, the groundwater treatment system has not been activated for regular use in the recovery of free-phase petroleum hydrocarbons; however, manual product gauging has been performed at 886RW04 (**Table 3-3**).

3.6.1 Groundwater Monitoring Well Sampling

On February 5 and February 12, 2003, 15 groundwater samples, including two duplicate samples, were collected from 13 monitoring well locations around Building 886. Sampling activities were performed in accordance with the *Fort Monmouth Standard Sampling Operating Procedure* (December 1997). All down-hole sampling equipment was decontaminated prior to use and between each sample. The samples were placed in laboratory-supplied bottles and placed on ice upon collection to ensure samples were kept below 4° C. The groundwater samples were analyzed by the FMETL for TPH, Target Compound List (TCL+30) plus 30 parameters, which includes VOCs and SVOCs, pesticides, PCBs, and TAL metals. A summary of the groundwater sampling activities, including rounds, well IDs, sample IDs, sample locations, collection/analysis date, analytical parameters and analysis method, is provided in **Table 3-8**. Copies of the groundwater sampling chain-of-custody forms and laboratory data sheets are presented in **Appendix F**. The results of the groundwater monitoring well sampling are presented and discussed in **Section 4.4**.

3.6.2 Groundwater Depth Measurements

During the monitoring well sampling conducted at the 13 wells at Building 886 on February 5 and February 12, 2003, groundwater was encountered in the 13 monitoring wells at Building 886 at depths ranging from 6.38 to 11.03 feet bgs (**Table 3-9**) with a varying gradient toward the northwest (**Figure 3-6**).

4.0 REMEDIAL ACTION RESULTS

This section includes a discussion of the chemical characterization of the site at Building 886 based on the various samples collected and analyzed, which include monitoring well groundwater samples and post-excavation RA soil samples. TVS personnel were responsible for the collection of samples during this RI. Sample analyses were performed by the FMETL.

4.1 Post-Excavation RA Soil Sampling Results

This section presents a discussion of the results of laboratory analyses performed for the 83 post-excavation RA soil samples collected from January 2002 through February 2003 to evaluate the effectiveness of the contaminated soil excavation activities with respect to soil contamination at Building 886. The laboratory data reports are included as **Appendix B**. **Figure 3-1** and **Figure 3-5** show the remaining soil contamination at the excavation site at Building 886.

During two post-excavation soil sampling events (Phase 1 and Phase 2) conducted from January 2002 to March 2002 and from November 2002 through February 2003, TPH was detected in 43 soil samples. Eleven samples contained soils which exceeded the NJDEP RDCSCC for TPH (>10,000 ppm), while the remaining 32 were detected below the NJDEP RDCSCC. No VOCs were detected in the soil samples at concentrations above their respective NJDEP RDCSCC. Analytes detected in post-excavation soil samples at concentrations above the NJDEP RDCSCC are highlighted and printed in bold typeface in **Table 4-1** (Phase 1) and **Table 4-6** (Phase 2). An exceedence summary for Phase 2 is included as **Table 4-7**.

4.1.1 TPH

During the Phase 1 RA sampling event, TPH was detected in five post-excavation soil samples all at concentrations below the RDCSCC.

During the Phase 2 soil sampling event, TPH was detected in 38 post-excavation soil samples. TPH was detected in 11 post-excavation soil samples at concentrations that exceed the RDCSCC and in 27 post-excavation soil samples at concentration below the RDCSCC.

TPH was detected in soil samples at concentrations exceeding the NJDEP RDCSCC of 10,000 mg/kg in 11 Phase 2 post-excavation soil sampling locations. Concentrations ranged from 10,284.4 mg/kg at 886-PX23W to 31,639.09 mg/kg at 886-PX24W.

4.1.2 VOCs

No VOCs were detected above the appropriate NJDEP RDCSCC at the site.

4.2 Phase 1 RI Soil Sampling Results

During the Phase 1 RI soil sampling, TPH was detected in 128 soil samples. Eleven samples contained soils which exceeded the NJDEP RDCSCC for TPH (>10,000 ppm),

while the remaining 117 were detected below the NJDEP RDCSCC. No VOCs were detected in the soil samples at concentrations above their respective NJDEP RDCSCC. Analytes detected in Phase 1 RI soil samples at concentrations above their respective NJDEP RDCSCC are highlighted and printed in bold typeface in **Table 4-2**. **Figure 3-2 s**hows the remaining soil contamination at the excavation site at Building 886 and an exceedence summary is included as **Table 4-3**.

4.2.1 TPH

During the Phase 1 RI soil sampling, TPH was detected in 127 soil samples; 11 soil samples exceeded the RDCSCC (886-8-72", 886-8-96", 886-8-120", 886-9-96", 886-11-96". 886-13-120", 886-17-48", 886-24-72", 886-29-96", 886-31-96" and 886-41 10'), and 116 soil samples were detected at concentrations below the RDCSCC.

TPH was detected in soil samples at concentrations exceeding the NJDEP RDCSCC of 10,000 mg/kg in 11 Phase 1 RI soil samples. Concentrations ranged from 11,024.72 mg/kg at 886-9-96" to 15,152.37 mg/kg at 886-24-72".

Because concentrations exceeding the NJDEP cleanup criteria were present, further sampling was deemed necessary to delineate the extents of contamination. Phase 2 investigation sampling for Building 886 is discussed in **Section 3.4**.

Boring 886-41 was resampled to confirm that the soil sample taken at 10' bgs exceeded the RDCSCC. The results showed a concentration well below the RDCSCC and that the first sample result was in error. These confirmation results are shown in **Table 4-4**.

4.2.2 VOCs

No VOCs were detected above their appropriate NJDEP RDCSCC at the site.

4.3 Phase 2 RI Soil Sampling Results

During the Phase 2 RI soil sampling, TPH was detected in 12 soil samples. Two samples contained soils which exceeded their respective NJDEP RDCSCC for TPH (>10,000 ppm), while the remaining ten were detected below their respective NJDEP RDCSCC.

No VOCs were detected in the soil samples at concentrations above their respective NJDEP RDCSCC.

Analytes detected in Phase 2 RI soil samples at concentrations above their respective NJDEP RDCSCC are highlighted and printed in bold typeface in **Table 4-4**. **Figure 3-4** shows the remaining soil contamination at Building 886. An exceedence summary is included as **Table 4-5.**

4.3.1 TPH

During the Phase 2 RI soil sampling, TPH was detected in two soil samples exceeding the RDCSCC.

TPH was detected in soil samples at concentrations exceeding the NJDEP RDCSCC of 10,000 mg/kg in two Phase 2 RI soil samples. Concentrations ranged from 14,885.10 mg/kg at 886-57-8' to 22,317.07 mg/kg at 886-57-6'.

Based on samples from surrounding borings 886-55,886-56, 886-58, and 886-59, whose sampling results were well below the RDCSCC, it was determined that the contamination found at boring 886-57 is limited to that small area. The occurrence of high voltage utilities in that area prohibited further excavation; therefore, these soils were left in place.

4.3.2 VOCs

No VOCs were detected above their appropriate NJDEP RDCSCC at the site.

4.4 Groundwater Monitoring Well Sampling Results

This section presents a discussion of the results of laboratory analyses performed for the 17 groundwater samples from the 13 groundwater monitoring and recovery wells (886MW01, 886MW02, 886MW03, 886MW04, 886MW05, 886RW01, 886RW02, 886RW03, 886RW04, 886RW05, 886RW06, 886RW07 and 886RW08) collected from January 2002 through February 2003 evaluate the effectiveness of the groundwater treatment system with respect to groundwater contamination at the Building 886. The well groundwater samples were analyzed for TPH, TCL+30 parameters and TAL metals. The laboratory data reports are included as **Appendix E**. **Figure 4-2** shows the remaining groundwater contamination at Building 886.

During this sampling event, a total of nine VOCs were detected in site groundwater. Two VOCs were detected at concentrations that exceed their respective GWQC, while the remaining seven VOCs were detected below their respective GWQC. TPH was detected in 12 samples; however there is no NJDEP GWQC for TPH. A total of ten SVOCs were detected in site groundwater. One SVOC was detected at a concentration that exceeded its GWQC, while the remaining nine SVOCs were detected below their respective GWQC. Three pesticides were detected in site groundwater at concentrations below their respective GWQC. A total of 20 metals were detected in site groundwater. Five metals were detected at concentrations that exceed their respective GWQC, while the remaining 15 metals were detected below their respective GWQC. Analytes detected in groundwater samples at concentrations above their respective NJDEP GWQC are highlighted and printed in bold typeface in **Table 4-8**. An exceedance summary is included as **Table 4-9**.

4.4.1 VOCs

During this sampling event, a total of two VOCs were detected in site groundwater at concentrations that exceed their respective GWQC.

Benzene was detected at concentrations exceeding the GWQC of 1.0 ug/L at three monitoring well locations. Concentrations ranged from 1.23 ug/L in 886RW07 to 2.16 ug/L in 886RW02.

Methyl ethyl ketone (2-butanone) was detected at concentrations exceeding the GWQC of 300 ug/L at two groundwater monitoring well locations. Concentrations ranged from 29,510.7 ug/L in 886RW08 to 30,039.7 ug/L in 886RW01.

4.4.2 SVOCs

During this sampling event, a one SVOC was detected in site groundwater at a concentration that exceeded its GWQC.

N-Nitrosodiphenylamine was detected at a concentration exceeding the GWQC of 20 ug/L at one groundwater monitoring well location. A concentration of 38.99 ug/L was detected in 886MW03.

4.4.3 Pesticides and PCBs

No pesticides or PCBs were detected above the appropriate GWQC at the site.

4.4.4 Metals

Aluminum was detected at concentrations exceeding the GWQC of 200 ug/L at six groundwater monitoring well locations. Concentrations ranged from 212 ug/L in 886MW01 to 1250 ug/L in 886MW03.

Arsenic was detected at a concentration exceeding the GWQC of 8 ug/L at one groundwater monitoring well location. A concentration of 12.2 ug/L was detected in 886MW02.

Iron was detected at concentrations exceeding the GWQC of 300 ug/L at 13 groundwater monitoring well locations. Concentrations ranged from 307 ug/L in 886MW05 to 97,500 ug/L in 886MW02.

Manganese was detected at concentrations exceeding the GWQC of 50 ug/L at 13 groundwater monitoring well locations. Concentrations ranged from 54.7 ug/L in 886MW05 to 3000 ug/L in 886MW02.

Sodium was detected at a concentration exceeding the GWQC of 50,000 ug/L at one groundwater monitoring well location. A concentration of 61,800 ug/L was detected in 886RW03.

4.5 Quality Assurance/Quality Control (QA/QC)

In order to verify the reliability of the analytical results, Versar reviewed the holding times for each sample and the results of the analysis of seven method blanks (five soil and two groundwater), nine trip blanks (seven soil and two groundwater), two field blanks (groundwater only), and 16 field duplicate samples (14 soil and two groundwater). All samples were analyzed by the FMETL within the prescribed holding time requirements for each analytical method.

Method Blanks

Laboratory method blanks accompanied each batch of samples for Building 886. These method blanks consist of laboratory-grade water that is processed identically to the samples and analyzed with the sample batch. A total of seven method blanks, five soil and two groundwater, were analyzed with Building 886 samples.

The results of the method blank analyses showed that one VOC was detected in at least one of the five method blank samples collected from the post-excavation soil at Building 886. Acetone was detected in one of the method blanks at a concentration below its NJDEP RDCSCC. The detection of acetone indicates that the sample handling procedures, including the sample glassware, may have introduced contamination into the sampling and analysis process.

The results of the method blank analyses showed that no VOCs, SVOCs, pesticides or PCBs were detected in the two method blank samples collected from the groundwater at Building 886.

Several metals were detected in at least one method blank groundwater sample, including aluminum, calcium, chromium, copper, lead, magnesium, manganese, potassium, selenium, silver, sodium and zinc. All of the metals were detected in only a few samples at very low concentrations below their respective NJDEP GWQC.

Trip Blanks

A total of nine trip blanks, seven soil and two groundwater, were included as part of Building 886 sampling programs to document that volatile organics were not introduced into the samples during the handling process. The trip blanks were prepared by the FMETL and consisted of sample bottles filled with laboratory deionized water. The trip blanks remained with the sample bottles in coolers and were returned to the laboratory for analysis with the post-excavation soil and groundwater monitoring well samples.

Two VOCs were detected in at least six trip blanks with the post-excavation soil samples. Acetone was detected in six trip blanks, four of which were detected at concentrations exceeding its NJDEP RDCSCC. Chloroform was detected in at least four trip blanks at concentrations above its NJDEP RDCSCC. The detections of chloroform and acetone indicate that the sample handling procedures, including the sample glassware, may have introduced contamination into the sampling and analysis process.

One VOC was detected in at least two trip blanks with the groundwater monitoring well samples. Chloroform was detected in both of the trip blanks at a concentration below its NJDEP GWQC. The detection of chloroform indicates that sample-handling procedures, including the sample glassware, may have introduced contamination into the sampling and analysis process.

Field Blanks

One field blank sample was obtained during each groundwater sampling activity to document the equipment decontamination procedures. A total of two field blanks were

collected during Building 886 groundwater sampling events. The field blanks were collected by rinsing laboratory-supplied deionized water over the sampling equipment used for each day's activities. The water was collected in clean laboratory-supplied sample jars and submitted for analysis along with Building 886 groundwater samples.

The results of the field blank analyses showed that one VOC was detected in at least two field blanks. Chloroform was detected in both of the field blanks at concentrations below its NJDEP GWQC. As noted for the trip blanks, the detection of chloroform indicates that sample-handling procedures, including the sample glassware, may have introduced contamination into the sampling and analysis process. In addition, the same VOCs found in the field blanks were also found in the trip blanks, suggesting that the sampling and decontamination procedures did not introduce additional contamination.

The results of the field blank analyses showed that no SVOCs, pesticides or PCBs were detected in the 16 field blank groundwater samples collected at Building 886.

As noted for the method blanks, several metals were detected in at least one field blank sample, including aluminum, barium, calcium, chromium, copper, iron, magnesium, manganese, potassium, silver, sodium and zinc. Most of the metals were detected in only a few samples at very low concentrations. Because these metals were all also detected in the method blank samples, the sampling and decontamination procedures do not appear to have been the source of sample contamination. However, any subsequent evaluation of the metals analytical results must account for the possibility of laboratory contamination resulting in false positives for the environmental samples.

Duplicate Samples

A total of 16 field duplicate samples (14 soil and two groundwater) were collected during the sampling events to verify the consistency of the entire sampling and analytical procedure throughout the various RI and RA areas. Relative Percent Difference (RPD) was calculated for each duplicate sample. The RPDs for TPH ranged from 2.7% to 200%, however the average RPD for all TPH results is 76.5%. Most of the RPD values are low (below 50%), suggesting reasonable precision in the field and laboratory operations. Some RPD values are high (over 50%), however, this is due to low sample concentrations and a corresponding low MDL used by the laboratory and is not indicative of poor precision because the differences noted may be attributed to the analytical sensitivity. Also, the comparison of one very small number with another very small number will result in a high RPD.

The RPDs for VOCs in soil also ranged from 5.5% to 25.8%, with an average of 9.3%. The RPDs for VOCs in groundwater ranged from 2.2% to 26.4%, and with an average of 9.6%. These RPDs are well below the established limit of 30% for laboratory duplicate samples and indicate that a high level of precision was maintained throughout the sampling and analytical procedures.

Based on average RPDs, the QA/QC sample results indicate good precision for all of the analyses. However, the presence of metals in the method blanks and field blanks indicate

that contamination may have been introduced by the sampling and analysis procedures. Therefore, any subsequent evaluation of the metals analytical results must account for the possibility of laboratory contamination resulting in false positives for the environmental samples.

5.0 CONCLUSIONS AND RECOMMENDATIONS

This section provides a discussion of the findings of the RA activities and recommendations for future action.

In order to determine the remaining contamination in soil and groundwater at Building 886, the first step was to identify exceedances of the NJDEP RDCSCC in the soil excavation and the NJDEP GWQC in monitoring well samples collected at Building 886. These exceedances are presented in **Section 4.0** above and in **Tables 4-2** and **Table 4-4**.

During the Phase 2 post-excavation soil sampling, TPH was detected in two post-excavation soil samples at concentrations exceeding its RDCSCC. As exceedances were identified, further excavation was performed. This eliminated one of the exceedances. The remaining TPH exceedance at 886-PX19/WW 7.5-8' is located on the north-west corner of the excavation wall. Additional excavation could not be performed due to the occurrence of utility lines which run through the center of the island and parallel to the street (**Figure 3-5**).

During the groundwater monitoring well sampling event, a total of eight groundwater constituents (benzene, methyl ethyl ketone, n-nitrosodiphenylamine, aluminum, arsenic, iron, manganese and sodium) were identified at concentrations exceeding their respective GWQC.

Several factors were used to eliminate or identify analytes as contaminants of concern (COCs), including the magnitude and frequency of the exceedances and comparisons to established background concentrations.

Two VOCs were detected in groundwater at Building 886 at concentrations exceeding their respective NJDEP GWQC. Benzene was detected at concentrations exceeding the GWQC of 1.0 ug/L at three monitoring well locations. Methyl ethyl ketone (2-butanone) was detected at concentrations exceeding the GWQC of 300 ug/L at only two groundwater monitoring well locations. Benzene is considered to be a groundwater COC at Building 886. Methyl ethyl ketone will remain a potential COC at Building 886 until further sampling can better assess the occurrence of this contaminant at the site.

886MW03 had been fitted with 4-6 inch adapter for possibility as use as a recovery well. Handex improperly used glue in the installation of the adapter which may have contributed to the appearance of methyl ethyl ketone at the site. These constituents will continue to be monitored.

One SVOC was detected in groundwater at Building 886 at concentrations exceeding their respective NJDEP GWQC. N-Nitrosodiphenylamine was detected at a concentration exceeding the GWQC of 20 ug/L at one groundwater monitoring well location. N-Nitrosodiphenylamine will remain a potential COC at Building 886 until further sampling can better assess the occurrence of this contaminant at the site.

The five different metals that were detected in Building 886 groundwater at concentrations exceeding their respective NJDEP GWQC are separated into background and non-native metals. The indigenous metals are compared to the Main Post Maximum Background Concentrations (MBC) identified in the Weston SI (1995). The non-native metals are discussed in relation to the New Jersey GWQC only.

Of the five metals detected in Building 886 groundwater that exceeded their respective GWQC, four metals (aluminum, iron, manganese and sodium) are common background constituents in Monmouth County soils. Elevated concentrations of these metals are routinely observed in groundwater samples collected at Fort Monmouth. In consideration of these facts, the groundwater analytical results for these metals were compared to their respective MBCs of 121,000 ug/L (aluminum), 431,000 ug/L (iron), 331 ug/L (manganese) and 21,500 ug/L (sodium), as follows:

- Aluminum is not considered to be a COC because aluminum was not detected at concentrations exceeding the MBC.
- Iron is not considered to be a COC because iron was not detected at concentrations exceeding the MBC.
- Manganese is not considered to be a COC because even though there were exceedences of the MBC in this area, these concentrations are not uncommon in other Fort Monmouth groundwater results. Also, manganese cannot be associated with any release at the site.
- Sodium is not considered to be a COC due to the proximity of Building 886 to sea water.

One non-native metal exceeded its GWQC (arsenic). The results of the soil sampling do not support a localized source of arsenic contamination in subsurface soil at Building 886. Arsenic was detected in only one monitoring well at a concentration greater than its NJDEP GWQC, therefore can be considered an anomalous result. It is unlikely that arsenic is adversely affecting the quality of shallow groundwater at Building 886 or that it will migrate offsite.

A groundwater monitoring program, including quarterly groundwater well monitoring for VOCs and SVOCs is recommended at Building 886.

Monitoring Well	Analyzed for	Future Sampling Status	Reason
886MW01	VOCs, SVOCs, Pesticides, PCBs, TAL Metals, TPH	Continue VOCs and SVOCs Quarterly	No COC detections, but is downgradient of exceeding wells.
886MW02	VOCs, SVOCs, Pesticides, PCBs, TAL Metals, TPH	Continue VOCs and SVOCs Quarterly	No COC detections, but is downgradient/cross-gradient of exceeding wells.
886MW03	VOCs, SVOCs, Pesticides, PCBs, TAL Metals, TPH	Continue VOCs and SVOCs Quarterly	Potential COC exceedence.

886MW04	VOCs, SVOCs, Pesticides, PCBs, TAL Metals, TPH	Eliminate	No COC exceedences and upgradient of exceeding wells.
886MW05	VOCs, SVOCs, Pesticides, PCBs, TAL Metals, TPH	Continue VOCs and SVOCs Quarterly	No COC exceedences but may be cross-gradient of exceeding wells.
886RW01	VOCs, SVOCs, Pesticides, PCBs, TAL Metals, TPH	Continue VOCs and SVOCs Annually	Potential COC exceedence.
886RW02	VOCs, SVOCs, Pesticides, PCBs, TAL Metals, TPH	Continue VOCs and SVOCs Annually	COC exceedence.
886RW03	VOCs, SVOCs, Pesticides, PCBs, TAL Metals, TPH	Continue VOCs and SVOCs Annually	No COC detections, but is downgradient of exceeding wells.
886RW04	VOCs, SVOCs, Pesticides, PCBs, TAL Metals, TPH	Continue VOCs and SVOCs Annually	No COC detections, but is downgradient of exceeding wells.
886RW05	VOCs, SVOCs, Pesticides, PCBs, TAL Metals, TPH	Continue VOCs and SVOCs Annually	COC exceedence.
886RW06	VOCs, SVOCs, Pesticides, PCBs, TAL Metals, TPH	Continue VOCs and SVOCs Annually	No COC detections, but is downgradient/cross-gradient of exceeding wells.
886RW07	VOCs, SVOCs, Pesticides, PCBs, TAL Metals, TPH	Continue VOCs and SVOCs Annually	COC exceedence.
886RW08	VOCs, SVOCs, Pesticides, PCBs, TAL Metals, TPH	Continue VOCs and SVOCs Annually	Potential COC exceedence.

The estimated annual costs for implementation of the remedial actions to be performed at Building 886 are provided below:

Estimated Annual Costs of Remedial Actions to be Performed at Building 886	
TASK	**ESTIMATED COSTS**
1. Total Labor Cost	$ 3,200
2. Laboratory Cost	$ 12,925
TOTAL ESTIMATED COSTS	$ 16,125

RI Geoprobe Groundwater Sampling Summary

886

Fort Monmouth, New Jersey

WELL ID			Loc. #13 12-16'	Loc. #29 12-16'
Date Collected			6/27/2002	6/27/2002
ANALYTE / Lab ID	Criterion	Units	2040503	2040504
VOCs				
1,1,2,2-Tetrachloroethane	* 1	ug/L	ND	ND
1,2-Dichlorobenzene	600	ug/L	ND	ND
1,3-Dichlorobenzene	600	ug/L	ND	ND
1,4-Dichlorobenzene	75	ug/L	ND	ND
Acetone	700	ug/L	ND	ND
Benzene	1	ug/L	ND	ND
Chloroform	6	ug/L	ND	ND
Dibromochloromethane	10	ug/L	ND	ND
Ethylbenzene	700	ug/L	ND	ND
Methyl ethyl ketone (2-Butanone)	300	ug/L	ND	ND
Methyl tertiary butyl ether (MTBE)	* 70	ug/L	ND	ND
Styrene	100	ug/L	ND	ND
Tetrachloroethylene	1	ug/L	ND	ND
Toluene	1000	ug/L	ND	ND
Xylenes (Total)	* 1000	ug/L	ND	ND
SVOCs				
1,2-Dichlorobenzene	600	ug/l	ND	ND
1,3-Dichlorobenzene	600	ug/l	ND	ND
1,4-Dichlorobenzene	75	ug/l	ND	ND
2-Methylnaphthalene	* 100	ug/l	ND	ND
Acenaphthene	400	ug/l	ND	ND
Acenaphthylene	* 100	ug/l	ND	ND
Bis(2-ethylhexyl)phthalate	30	ug/l	ND	ND
Dibenzofuran	* 100	ug/l	ND	ND
Diethylphthalate	5000	ug/l	ND	ND
Fluorene	300	ug/l	ND	ND
Naphthalene	* 300	ug/l	ND	ND
N-Nitrosodiphenylamine	20	ug/l	ND	ND
Phenanthrene	* 100	ug/l	ND	ND
Pyrene	200	ug/l	ND	ND

Notes: VOCs = volatile organic compounds; SVOCs = semi-volatile organic compounds; TPH = Total Petroleum Hydrocarbons;
PCBs = polyhloronated biphenyls; MDL = Method Detection Limit; ND = Not Detected;
ug/L = micrograms per liter, equivalent to parts per billoion (ppb); mg/kg = miligrams per kilogram, equivalent to parts per million; NA = Not Analyzed/Not Applicable;
Shaded block identifies sample and associated constituent concentration that exceeds the criterion. * = Interim Criterion;

Criterion = GW Criterion: NJDEP Groundwater Quality Criteria (Higher of GWQC and PQL) per N.J.A.C. 7:9-6.

125 feet in thickness at Fort Monmouth

EXPLANATION

Outcrop area of the Navesink Formation, Red Bank Sand, Tinton Sand, Hornerstown Sand, Vincentown Formation, and Manasquan Formation

600 — Line of equal thickness of the composite confining bed Dashed where approximately located. Interval 50 feet

○ Well location

Mr. Douglas C. Guenther
Environmental Protection Specialist
U.S. Army, Directorate of Public Works
Attn: SELFM-PW-EV, Bldg. 173
Fort Monmouth, NJ 07703

RE: **Product Recovery System**
Building 886
Fort Monmouth, NJ

Dear Mr. Guenther,

Please find the attached O&M sheets for the installation of the product recovery system located at building 886. A description of the work that was performed each day is summarized on each sheet. Please contact me at 732-536-8667 ext. 337 with any questions you may have.

Sincerely,

Fred M. Howlett
Associate Project Manager

TYPE OF WELL (as per Well Permit Categories) MONITORING
Regulatory Program Requiring Well Case I.D.#

CONSULTING FIRM/FIELD SUPERVISOR (if applicable) Handex Tele. # 732/536-1376

WELL CONSTRUCTION

Total depth drilled 17 ft.
Well finished to 17 ft.

Borehole diameter:
Top 10 in.
Bottom 10 in.

Well was finished: ☐ above grade
☒ flush mounted

If finished above grade, casing height (stick up) above land surface — ft.

Was steel protective casing installed?
☐ Yes ☒ No

Static water level after drilling 6 ft.

Water level was measured using probe

Well was developed for 1/2 hours
at 1 gpm

Note: Measure all depths from land surface	Depth to Top (ft.)	Depth to Bottom (ft.)	Diameter (inches)	Material	Wgt./Rating (lbs/sch no.)
Single/Inner Casing	0	2	4	PVC	SCH 40
Middle Casing (for triple cased wells only)					
Outer Casing (largest diameter)					
Open Hole or Screen (No. Used)	2	17	4	PVC	.010 Slot
Blank Casings (No. Used)					
Tail Piece					
Gravel Pack	2	17	10	Sand	#1
Grout	0	2	10	Neat Cement Bentonite	97 lbs. 5 lbs.

Grouting Method Pressure
Drilling Method Hollow Stem Augers

Method of development pump + surge

Was permanent pumping equipment installed? ☐ Yes ☒ No

Pump capacity — gpm

Pump type: —

Drilling Fluid Type of Rig B-59

Health and Safety Plan submitted? ☒ Yes ☐ No

Level of Protection used on site (circle one) None (D) C B A

I certify that I have constructed the above referenced well in accordance with all well permit requirements and applicable State rules and regulations.

WELL CONSTRUCTION

Total depth drilled 17 ft.
Well finished to 17 ft.

Borehole diameter:
Top 14 in.
Bottom 14 in.

Well was finished: ☐ above grade ☒ flush mounted

If finished above grade, casing height (stick up) above land surface — ft.

Was steel protective casing installed? ☐ Yes ☒ No

Static water level after drilling 6 ft.

Water level was measured using probe

Well was developed for 1 hours at 1 gpm

Method of development pump + surge

Was permanent pumping equipment installed? ☐ Yes ☒ No

Pump capacity — gpm

Pump type: —

Drilling Fluid — Type of Rig B-59

MONITORING WELL CERTIFICATION FORM B - LOCATION CERTIFICATION

Name of Owner: U.S Army

Name of Facility: Fort Monmouth, Eatontown, NJ

Location: Site 886

Case Number(s): _____ (UST #, ISRA #, Incident #, or EPA #)

LAND SURVEYOR'S CERTIFICATION

Well Permit Number: __ __ - __ __ __ __ __ - __
(This number must be permanently affixed to the well casing.)

Owners Well Number (As shown on application or plans): MW-1

Geographic Coordinate NAD 83 (to nearest 1/10 of second):

Longitude: West 74° 02' 16.53" Latitude: North 40° 18' 37.50"

New Jersey State Plane Coordinates NAD 83 to nearest 10 feet:

North 538324 East 620981

Elevation of Top of Inner Casing (cap off) at reference mark (nearest 0.01'): 14.04

Source of elevation datum (benchmark, number/description and elevation/datum. If an on-site datum is used, identify here, assume datum of 100', and give approximated actual elevation.)

Station Eleven 2 (NAVD 88)

Significant observations and notes: Benchmark is located 66 feet west of the centerline of Ocean Avenue in Long Branch, 86 feet south of the southeast corner of the Coast Guard Station

AUTHENTICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

RECEIVED
SEP 25 2003

RE: **Product Recovery System**
Building 886
Fort Monmouth, NJ

Dear Mr. Guenther,

Please find the attached O&M manual and as built site plan for the product recovery system located at building 886. Also included are the well records and well permits for the monitoring and recovery wells. Please contact me at 732-536-8667 ext. 337 with any questions you may have.

Sincerely,

Fred M. Howlett
Associate Project Manager

CEE

GNE/200/SOS

Down-well Controllerless Genie Product Only Recovery System

SPECIFICATIONS

The GNE/200/SOS System is a controllerless Product Only Recovery System that removes free-floating hydrocarbon down to a sheen (≤ 0.01 in.) from depths of 200 feet in wells as small as 2 inches in diameter. This system is upgradeable to include Tank-Full Shut-Off (see "System Options" for more information). The GNE/200/SOS System contains a Selective Oil Skimmer (SOS), a Genie controllerless, down-well, resilient bladder product pump (GNE), and a hose & hardware package.

METHOD OF OPERATION

The skimmer is located below the Genie Controllerless Pump. The skimmer has a floating intake head that follows the fluctuating water table.

Hydrocarbon first enters the Genie System through the floating intake's outer debris screen, then through an inner oleophilic hydrophobic screen, down through a flexible, yellow tube, up into the hollow guide tube, and into the Bladder Pump portion of the Genie.

The Genie Controllerless Pump draws product from the skimmer and pushes it to the surface. It cycles at a preset rate, introducing and releasing compressed air to the Bladder Pump portion of the Genie. When compressed air is introduced to the Bladder Pump, the bladder collapses. When the air is released, the bladder expands drawing in hydrocarbon from the skimmer of the Genie System. As compressed air is introduced again, the bladder collapses, pushing the hydrocarbon in the bladder up through the product hose and into a surface-mounted holding tank.

This process repeats itself automatically at a predetermined rate.

SELECTIVE OIL SKIMMER (SOS)

The SOS Skimmer consists of three main items: a Floating Intake Head, Guide Rod & Flexible Tube, and 2 Well Centering Disks.

The Floating Intake Head:

- Consists of an outer debris screen, a floatation collar, and an inner semi-permeable (selective) screen which repels water and allows liquid hydrocarbons to pass.
- Removes free-floating hydrocarbon to a sheen (≤ 0.01 inches).
- Floats at the product-water interface in the well and automatically adjusts to any groundwater fluctuation within its travel range.
- Slides on a hollow, stainless steel guide tube which passes down through the center of the skimmer head.
- Is connected to the guide tube via a flexible (fuel rated) tube which hangs below the skimmer head and guide tube.

The Well-Centering Disks:

- Prevent the Skimmer Floating Intake Head from contacting the sides of the well casing.
- Reside on upper and lower ends of the skimmer.

GNE/200/SOS (Cont'd)

SYSTEM REQUIREMENTS/PARAMETERS

The Genie/200/SOS Product Only Recovery System:

- Uses less than 0.5 scfm of compressed air @ 80 psi for most applications.
- Has an operating pressure from 40 to 120 psi.
- Requires a Female NPT fitting on the product recovery tank (which is typical of 55 gallon drums) for the product discharge adapter (Male NPT).
- Functions up to a total pressure head of 200 feet.
- Includes SOS Skimmers that function best with light hydrocarbons having low viscosity such as gasoline, diesel, and jet fuels. More viscous hydrocarbons may require the use of CEE Specific Gravity (SPG) Skimmers described at the beginning of this section. Please refer to the white "Active Skimmers" tab of this section for additional details.
- Can pass wet, oily compressed air.

SYSTEM OPTIONS

The Genie/200/SOS Product Only Recovery System is fully expandable for multi-well applications and has several upgrade options. It has the option of:

- Adding Tank-Full Shut-Off (TFSO) logic for overfill protection of the product storage tank. Please refer to the blue "Tank-Full Shut-Off System" tab.
- Adding High-Water Shut-Off (HWSO) logic which turns off the Product Pump temporarily and prevents water contamination in the product storage tank during high-water conditions.
- Adding Product Sensing Recovery (PSR) logic which will turn on the Genie Pump only when product is present in the well.
- Using tubing with barbs instead of industrial grade hose with quick-connects.
- Using different types of well caps (i.e. with barbs, quick-connects, well seal, and/or blind flange).
- Pump cycle counters are easily connected in series between the air supply and Genie system to count the number of pump cycles that occur within a given time period.

MATERIALS OF CONSTRUCTION

SOS Skimmer:

- Stainless Steel
- Viton
- Closed Cell Foam
- Delrin & other Engineering Plastics
- Brass

Product Pump:

- Brass
- Stainless Steel
- Viton

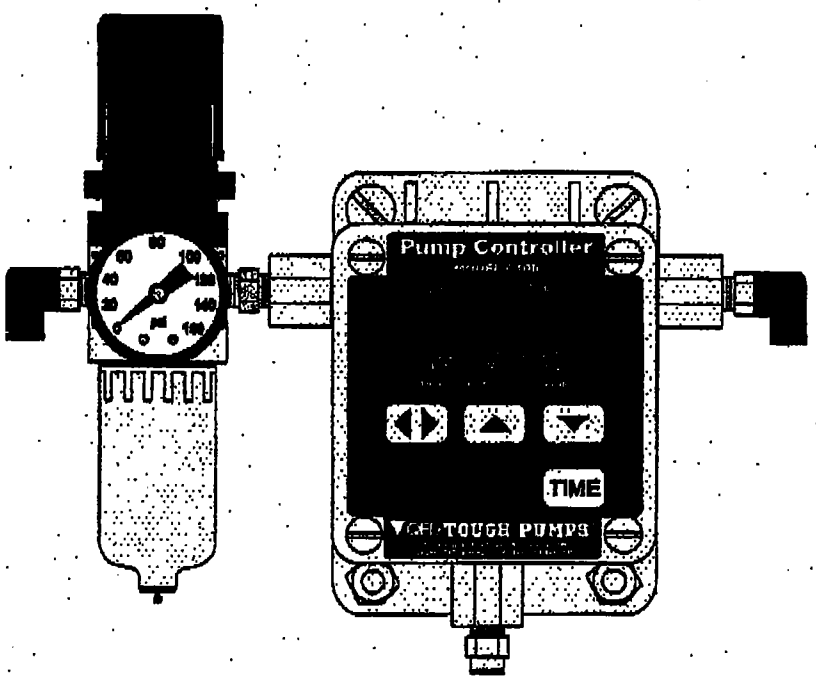
SOLAR/ELECTRICAL/PNEUMATIC DIGITAL PUMP CONTROLLER **C100**

Optimize Floating Hydrocarbon Recovery with the Digital Controller from QED



Versatile Ferret Controller Provides Easy Adjustment of Floating Hydrocarbon Removal Rates, Including Programmed "OFF" Periods

Ferret In-Well Separators are effective, versatile tools for removing floating hydrocarbons without water, and now they're even more versatile with the C100 Digital Controller. The C100 offers easy digital control of Ferret operation to match your project's specific floating hydrocarbon, (LNAPL) properties and site conditions. The C100 controller even includes at no extra cost the ability to program system "OFF" periods, so that the maximum LNAPL flow through the soil can be maintained. Such "OFF" periods can enhance higher net LNAPL removal rates.

Every C100 includes both solar power and AC power choices. The solar powered mode of operation includes a 10 - day battery backup, and has been field proven even under northern Midwestern winter conditions. The solar mode also bears a CSA intrinsic safety rating. For indoor applications, an AC powered adapter is simply plugged into the C100.

The electronics in the C100 are specially sealed for long life and have been proven reliable under extreme climate conditions.

C100 Benefits

- Easy digital control and display of Ferret cycle settings
- Includes programmable system "OFF" periods to optimize LNAPL removal rates to match site conditions
- Intrinsically safe solar power with 10 - day battery backup
- AC power choice included
- Compact enclosure
- Sealed electronics
- Designed for rugged site conditions

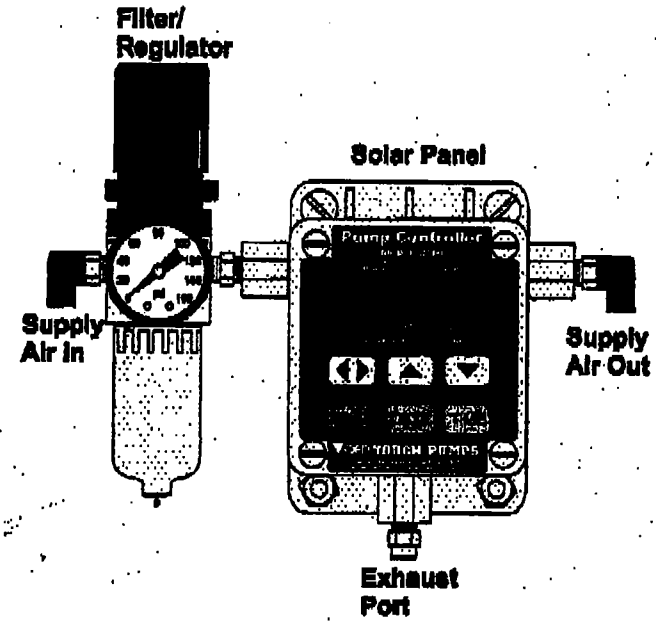
P/N 2240 REV. #1 2-25-99

TECHNICAL DATA / SPECIFICATION SHEET — SOLAR/ELECTRICAL/PNEUMATIC PUMP CONTROLLER — C100



CONTROL KEYS:

Allows manual toggling of valve and system ON & OFF cycles. Also allows enabling & disabling of system.

DATA — Multi screen key to sequentially display well status, battery status, solar panel voltage, ON/OFF and system valve.

TIME — Allows system counts and time sums, and valve time settings.

SET KEYS:

Left/right cursor key

Up or add key.

Down or subtract key.

NOTE:
Display turns off after five minutes of non activity. Press any key to turn display back on.

CONTROLLER TYPE:

SOLAR/ELECTRICAL/PNEUMATIC

ENCLOSURE:

DIMENSIONS - 3.5" (8.9 cm) W x 3.65" (9.3 cm) H x 3.5" (8.9 cm) D

WEIGHT - 3 LBS. (1.4 kg)

TYPE - Fiber reinforced thermoplastic NEMA 4X & UL 508

POWER:

SOLAR - Shatterproof solar panel on enclosure top, with backup battery pack with 10 day reserve capacity. CSA compliance, intrinsically safe, class 1, division 1, group C & D

C100 IS CSA RATED INTRINSICALLY SAFE WHEN USED IN SOLAR MODE

110 VAC - Power converter plugs in to standard 110 VAC outlet and supplies 6 VDC, (300 milliamp) to connector plug in enclosure bottom

C100 IS NOT RATED INTRINSICALLY SAFE WHEN USED WITH 110 VAC POWER CONVERTER

TEMPERATURE:

OPERATING - -20° F to 150° F (28.9° C to 65.6° C)

DISPLAY:

TYPE - LCD display, 16 character alphanumeric w/ temperature compensated contrast and power off control

WINDOW - Non-glare, double hardened optical acrylic

PNEUMATIC CONTROL:

TYPE - Latching solenoid w/ dual port manifold

FITTINGS - Female 1/4-18 NPT brass with nickel plating

PRESSURE - 100 P.S.I. (690 kPa) maximum

FLOW CAPACITY:

Sufficient for single Ferret - Call factory for other requirements

METHODOLOGY SUMMARY

PARAMETER	REFERENCE
TARGET ANALYTE LIST METALS	Standard Methods, 18th ed.
Aluminum	3120B
Antimony	3120B
Arsenic	3120B
Barium	3120B
Beryllium	3120B
Cadmium	3120B
Calcium	3120B
Chromium	3120B
Cobalt	3120B
Copper	3120B
Iron	3120B
Lead	3120B
Magnesium	3120B
Manganese	3120B
Mercury	3112B
Nickel	3120B
Potassium	3120B
Selenium	3120B
Silver	3120B
Sodium	3120B
Thallium	3120B
Vanadium	3120B
Zinc	3120B

PARAMETER	REFERENCE
TARGET COMPOUND LIST ORGANICS	Federal Register 40 CFR Part 136 Appendix A
Base/Neutral and Acid Extractables by GC/MS	625
Purgeable Organics by GC/MS	624
Pesticide and PCB by GC	608

VOLATILE ORGANICS

US ARMY FT. MONMOUTH ENVIRONMENTAL LABORATORY
NJDEP CERTIFICATION # 13461

Definition of Qualifiers

MDL	:	Method Detection Limit
J	:	Compound identified below detection limit
B	:	Compound found in blank
D	:	Results are from a dilution of the sample
U	:	Compound searched for but not detected
E	:	Compound exceeds calibration limit
PQL	:	Practical Quantitation Limit
NLE	:	No limit established
RT	:	Retention time

* Higher of PQL's and Ground Water Criteria as per NJAC 7:9-6 2 Sept-97

Qualifiers

E= Value Exceeds Linear Range
D= Value from dilution
B= Compound in Related Blank
MDL= Method Detection Limit
NLE= No Limit Established
R.T.=Retention Time
RL= Reporting Limit. The values between the MDL and RL are considered estimated.

The enclosed report relates only to the items tested. The report may not be reproduced, except in full, without written approval of the U.S. Army Fort Monmouth Directorate of Public Works.

METHODOLOGY SUMMARY

PARAMETER	REFERENCE
TARGET ANALYTE LIST	Standard Methods, 18th ed.
Aluminum	3120B
Antimony	3120B
Arsenic	3120B
Barium	3120B
Beryllium	3120B
Cadmium	3120B
Calcium	3120B
Chromium	3120B
Cobalt	3120B
Copper	3120B
Iron	3120B
Lead	3120B
Magnesium	3120B
Manganese	3120B
Mercury	3112B
Nickel	3120B
Potassium	3120B
Selenium	3120B
Silver	3120B
Sodium	3120B
Thallium	3120B
Vanadium	3120B
Zinc	3120B
TARGET COMPOUND LIST	Federal Register 40 CFR Part 136 Appendix A
Base/Neutrals and Acid Extractables by GC/MS	625
Purgeable Organcis by GC/MS	624
Pesticides and PCB's by GC	608

VOLATILE ORGANICS

US ARMY FT. MONMOUTH ENVIRONMENTAL LABORATORY
NJDEP CERTIFICATION # 13461

Definition of Qualifiers

U: The compound was analyzed for but not detected.

B: Indicates that the compound was found in the associated method blank as well as in the sample.

J: Indicates an estimated value. This flag is used:

(1) When the mass spec and retention time data indicate the presence of a compound however the result is less than the MDL but greater than zero.

(2) When estimating the concentration of a tentatively identified compound (TIC), where a 1:1 response is assumed.

D: This flag is used to identify all compounds (target or TIC) that required a dilution.

E: Indicates the compound's concentration exceeds the calibration range of the instrument for that specific analysis.

N: This flag is only used for TICs. It indicates the presumptive evidence of a compound. For a generic characterization of a TIC, such as unknown hydrocarbon, the flag is not used.

117-84-0	Di-n-octylphthalate			not detected	100	1.48	10.00	ug/L	
205-99-2	Benzo[b]fluoranthene			not detected	10	0.67	10.00	ug/L	
207-08-9	Benzo[k]fluoranthene			not detected	2	1.11	10.00	ug/L	
50-32-8	Benzo[a]pyrene			not detected	20	0.97	10.00	ug/L	
193-39-5	Indeno[1,2,3-cd]pyrene			not detected	20	1.16	10.00	ug/L	
53-70-3	Dibenz[a,h]anthracene			not detected	20	1.26	10.00	ug/L	
191-24-2	Benzo[g,h,i]perylene			not detected	NLE	1.24	10.00	ug/L	

* Higher of PQL's and Ground Water Criteria as per NJAC 7:9-6 2-Sept-97

Qualifiers

E= Value Exceeds Linear Range
D= Value from dilution
B= Compound in Related Blank
MDL= Method Detection Limit
NLE= No Limit Established
R.T.=Retention Time
RL= Reporting Limit. The values between the MDL and RL are considered estimated.

Method of Analysis: Std. Methods 18th, Method 3120B, 3112B

TAL-METALS RESULTS SUMMARY (ug/L)

Element	Date of Analysis	Result (ug/L)	Regulatory Level (ug/L)*	R.L. (ug/L)	MDL (ug/L)
Aluminum	10/27/03	ND	200	200	21.8
Antimony	10/27/03	ND	20	20.00	3.70
Arsenic	10/27/03	ND	8	5.00	2.30
Barium	10/27/03	ND	2000	5.00	0.500
Beryllium	10/27/03	0.0268	20	0.500	0.020
Cadmium	10/27/03	ND	4	2.00	0.400
Calcium	10/27/03	ND	NLE	1000	65.00
Chromium	10/27/03	ND	100	5.00	1.00
Cobalt	10/27/03	ND	NLE	2.00	0.300
Copper	10/27/03	0.400	1000	5.00	0.300
Iron	10/27/03	ND	300	500	78.00
Lead	10/27/03	1.08	10	5.00	0.800
Magnesium	10/27/03	ND	NLE	1000	11.00
Manganese	10/27/03	ND	50	5.00	0.900
Mercury	11/04/03	ND	2	0.500	0.100
Nickel	10/27/03	ND	100	5.00	0.700
Potassium	10/27/03	1150	NLE	1000	25.00
Selenium	10/27/03	ND	50	20.00	4.80
Silver	10/27/03	ND	20	5.00	0.600
Sodium	10/27/03	ND	50000	5000	1160
Thallium	10/27/03	ND	10	10.00	1.90
Vanadium	10/27/03	ND	NLE	5.00	0.200
Zinc	10/27/03	4.78	5000	50.00	1.60

ND = Not Detected, MDL = Method Detection Limit, NLE = No Limit Established
* Higher of PQL's and Ground Water Quality Criteria as per N.J.A.C. 7:9-6
R.L= Reporting limit. Note: The results reported between MDL and RL are estimated.

Method of Digestion: E.P.A SW-846, Method 3015A
Method of Analysis: Std. Methods 18th, Method 3120B, 3112B

TAL-METALS RESULTS SUMMARY (ug/L)

Element	Date of Analysis	Result (ug/L)	Regulatory Level (ug/L)*	R.L. (ug/L)	MDL (ug/L)
Aluminum	11/05/03	ND	200	200	21.8
Antimony	11/05/03	ND	20	20.00	3.70
Arsenic	11/05/03	ND	8	5.00	2.30
Barium	11/05/03	ND	2000	5.00	0.500
Beryllium	11/05/03	0.0268	20	0.500	0.020
Cadmium	11/05/03	ND	4	2.00	0.400
Calcium	11/05/03	ND	NLE	1000	65.00
Chromium	11/05/03	ND	100	5.00	1.00
Cobalt	11/05/03	ND	NLE	2.00	0.300
Copper	11/05/03	0.400	1000	5.00	0.300
Iron	11/05/03	ND	300	500	78.00
Lead	11/05/03	1.08	10	5.00	0.800
Magnesium	11/05/03	ND	NLE	1000	11.00
Manganese	11/05/03	ND	50	5.00	0.900
Mercury	11/04/03	ND	2	0.500	0.100
Nickel	11/05/03	ND	100	5.00	0.700
Potassium	11/05/03	1150	NLE	1000	25.00
Selenium	11/05/03	ND	50	20.00	4.80
Silver	11/05/03	ND	20	5.00	0.600
Sodium	11/05/03	ND	50000	5000	1160
Thallium	11/05/03	ND	10	10.00	1.90
Vanadium	11/05/03	ND	NLE	5.00	0.200
Zinc	11/05/03	4.78	5000	50.00	1.60

ND = Not Detected, MDL = Method Detection Limit, NLE = No Limit Established
* Higher of PQL's and Ground Water Quality Criteria as per N.J.A.C. 7:9-6
R.L= Reporting limit. Note: The results reported between MDL and RL are estimated.

Report of Analysis

VOLATILE ORGANICS

US ARMY FT. MONMOUTH ENVIRONMENTAL LABORATORY
NJDEP CERTIFICATION # 13461

Definition of Qualifiers

U: The compound was analyzed for but not detected.

B: Indicates that the compound was found in the associated method blank as well as in the sample.

J: Indicates an estimated value. This flag is used:

(1) When the mass spec and retention time data indicate the presence of a compound however the result is less than the MDL but greater than zero.

(2) When estimating the concentration of a tentatively identified compound (TIC), where a 1:1 response is assumed.

D: This flag is used to identify all compounds (target or TIC) that required a dilution.

E: Indicates the compound's concentration exceeds the calibration range of the instrument for that specific analysis.

N: This flag is only used for TICs. It indicates the presumptive evidence of a compound. For a generic characterization of a TIC, such as unknown hydrocarbon, the flag is not used.

* Higher of PQL's and Ground Water Criteria as per NJAC 7:9-6 2-Sept-97

Qualifiers

E= Value Exceeds Linear Range
D= Value from dilution
B= Compound in Related Blank
MDL= Method Detection Limit
NLE= No Limit Established
R.T.=Retention Time
RL= Reporting Limit. The values between the MDL and RL are considered estimated.

R.L= Reporting limit.

Report of Analysis
U.S. Army, Fort Monmouth Environmental Laboratory
NJDEP Certification # 13461

Client: U.S. Army
DPW, SELFM-PW-EV
Bldg. 173
Ft. Monmouth, NJ 07703

Lab ID #: 4038807
Sample Received: 05/25/04
Sample Matrix: Aqueous

Site: 886 Wells
Ft. Monmouth, New Jersey

Field ID#: 886MW04

Method of Digestion: E.P.A SW-846, Method 3010A
Method of Analysis: Std. Methods 18th, Method 3120B, 3112B

TAL-METALS RESULTS SUMMARY (ug/L)

Element	Date of Analysis	Result (ug/L)	Regulatory Level (ug/L)*	R.L. (ug/L)
Aluminum	06/07/04	711	200	100
Antimony	06/07/04	ND	20	20.00
Arsenic	06/07/04	ND	8	5.00
Barium	06/07/04	19.0	2000	5.00
Beryllium	06/07/04	ND	20	0.500
Cadmium	06/07/04	ND	4	2.00
Calcium	06/07/04	4810	NLE	1000
Chromium	06/07/04	ND	100	5.00
Cobalt	06/07/04	ND	NLE	2.00
Copper	06/07/04	ND	1000	5.00
Iron	06/07/04	1450	300	500
Lead	06/07/04	ND	10	5.00
Magnesium	06/07/04	3420	NLE	1000
Manganese	06/07/04	21.8	50	5.00
Mercury	06/08/04	ND	2	0.500
Nickel	06/07/04	ND	100	5.00
Potassium	06/07/04	1040	NLE	1000
Selenium	06/07/04	ND	50	20.00
Silver	06/07/04	ND	20	5.00
Sodium	06/07/04	6170	50000	5000
Thallium	06/07/04	ND	10	10.00
Vanadium	06/07/04	ND	NLE	5.00
Zinc	06/07/04	ND	5000	50.00

METHODOLOGY SUMMARY

PARAMETER	REFERENCE
TARGET ANALYTE LIST	Standard Methods, 18th ed.
Aluminum	3120B
Antimony	3120B
Arsenic	3120B
Barium	3120B
Beryllium	3120B
Cadmium	3120B
Calcium	3120B
Chromium	3120B
Cobalt	3120B
Copper	3120B
Iron	3120B
Lead	3120B
Magnesium	3120B
Manganese	3120B
Mercury	3112B
Nickel	3120B
Potassium	3120B
Selenium	3120B
Silver	3120B
Sodium	3120B
Thallium	3120B
Vanadium	3120B
Zinc	3120B
TARGET COMPOUND LIST	Federal Register 40 CFR Part 136 Appendix A
Base/Neutrals and Acid Extractables by GC/MS	625
Purgeable Organcis by GC/MS	624
Pesticides and PCB's by GC	608

VOLATILE ORGANICS

US ARMY FT. MONMOUTH ENVIRONMENTAL LABORATORY
NJDEP CERTIFICATION # 13461

Definition of Qualifiers

U: The compound was analyzed for but not detected.

B: Indicates that the compound was found in the associated method blank as well as in the sample.

J: Indicates an estimated value. This flag is used:

(1) When the mass spec and retention time data indicate the presence of a compound however the result is less than the MDL but greater than zero.

(2) When estimating the concentration of a tentatively identified compound (TIC), where a 1:1 response is assumed.

D: This flag is used to identify all compounds (target or TIC) that required a dilution.

E: Indicates the compound's concentration exceeds the calibration range of the instrument for that specific analysis.

N: This flag is only used for TICs. It indicates the presumptive evidence of a compound. For a generic characterization of a TIC, such as unknown hydrocarbon, the flag is not used.

VOLATILE ORGANICS

US ARMY FT. MONMOUTH ENVIRONMENTAL LABORATORY
NJDEP CERTIFICATION # 13461

Definition of Qualifiers

U: The compound was analyzed for but not detected.

B: Indicates that the compound was found in the associated method blank as well as in the sample.

J: Indicates an estimated value. This flag is used:

(1) When the mass spec and retention time data indicate the presence of a compound however the result is less than the MDL but greater than zero.

(2) When estimating the concentration of a tentatively identified compound (TIC), where a 1:1 response is assumed.

D: This flag is used to identify all compounds (target or TIC) that required a dilution.

E: Indicates the compound's concentration exceeds the calibration range of the instrument for that specific analysis.

N: This flag is only used for TICs. It indicates the presumptive evidence of a compound. For a generic characterization of a TIC, such as unknown hydrocarbon, the flag is not used.

Report of Analysis
U.S. Army, Fort Monmouth Environmental Laboratory
NJDEP Certification # 13461

Client: U.S. Army
DPW, SELFM-PW-EV
Bldg. 173
Ft. Monmouth, NJ 07703

Lab ID #: 40578
Sample Prepared: NA

Site: 886 Wells
Ft. Monmouth, New Jersey

Field ID#: Method Blank

Method of Digestion: E.P.A SW-846, Method 3010A
Method of Analysis: Std. Methods 18th, Method 3120B, 3112B

TAL-METALS RESULTS SUMMARY (ug/L)

Element	Date of Analysis	Result (ug/L)	Regulatory Level (ug/L)*	R.L. (ug/L)
Aluminum	08/20/04	ND	200	100
Antimony	08/20/04	ND	20	20.00
Arsenic	08/20/04	ND	8	5.00
Barium	08/20/04	ND	2000	5.00
Beryllium	08/20/04	ND	20	0.500
Cadmium	08/20/04	ND	4	2.00
Calcium	08/20/04	ND	NLE	1000
Chromium	08/20/04	ND	100	5.00
Cobalt	08/20/04	ND	NLE	2.00
Copper	08/20/04	ND	1000	5.00
Iron	08/20/04	ND	300	500
Lead	08/20/04	ND	10	5.00
Magnesium	08/20/04	ND	NLE	1000
Manganese	08/20/04	ND	50	5.00
Mercury	08/30/04	ND	2	0.500
Nickel	08/20/04	ND	100	5.00
Potassium	08/20/04	ND	NLE	1000
Selenium	08/20/04	ND	50	20.00
Silver	08/20/04	ND	20	5.00
Sodium	08/20/04	ND	50000	5000
Thallium	08/20/04	ND	10	10.00
Vanadium	08/20/04	ND	NLE	5.00
Zinc	08/20/04	ND	5000	50.00

ND = Not Detected, NLE = No Limit Established
* Higher of PQL's and Ground Water Quality Criteria as per N.J.A.C. 7:9-6
R.L = Reporting limit.

COMMENTS:

US ARMY FT. MONMOUTH ENVIRONMENTAL LABORATORY
NJDEP CERTIFICATION # 13461

Definition of Qualifiers

U: The compound was analyzed for but not detected.

B: Indicates that the compound was found in the associated method blank as well as in the sample.

J: Indicates an estimated value. This flag is used:

(1) When the mass spec and retention time data indicate the presence of a compound however the result is less than the MDL but greater than zero.

(2) When estimating the concentration of a tentatively identified compound (TIC), where a 1:1 response is assumed.

D: This flag is used to identify all compounds (target or TIC) that required a dilution.

E: Indicates the compound's concentration exceeds the calibration range of the instrument for that specific analysis.

N: This flag is only used for TICs. It indicates the presumptive evidence of a compound. For a generic characterization of a TIC, such as unknown hydrocarbon, the flag is not used.

* Higher of PQL's and Ground Water Criteria as per NJAC 7:9-6 2-Sept-97

Qualifiers

E= Value Exceeds Linear Range

D= Value from dilution

B= Compound in Related Blank

MDL= Method Detection Limit

NLE= No Limit Established

R.T.=Retention Time

RL= Reporting Limit. The values between the MDL and RL are considered estimated.

Sample Matrix: Aqueous

Site: 886 Wells
Ft. Monmouth, New Jersey

Field ID#: 886MW04

Method of Digestion: E.P.A SW-846, Method 3010A
Method of Analysis: Std. Methods 18th, Method 3120B, 3112B

TAL-METALS RESULTS SUMMARY (ug/L)

Element	Date of Analysis	Result (ug/L)	Regulatory Level (ug/L)*	R.L. (ug/L)
Aluminum	10/22/04	343	200	100
Antimony	10/22/04	ND	20	20.00
Arsenic	10/22/04	ND	8	5.00
Barium	10/22/04	54.8	2000	5.00
Beryllium	10/22/04	ND	20	0.500
Cadmium	10/22/04	ND	4	2.00
Calcium	10/22/04	7380	NLE	1000
Chromium	10/22/04	ND	100	5.00
Cobalt	10/22/04	5.66	NLE	2.00
Copper	10/22/04	ND	1000	5.00
Iron	10/22/04	ND	300	500
Lead	10/22/04	ND	10	5.00
Magnesium	10/22/04	7640	NLE	1000
Manganese	10/22/04	79.3	50	5.00
Mercury	10/25/04	ND	2	0.500
Nickel	10/22/04	7.52	100	5.00
Potassium	10/22/04	1640	NLE	1000
Selenium	10/22/04	ND	50	20.00
Silver	10/22/04	ND	20	5.00
Sodium	10/22/04	15500	50000	5000
Thallium	10/22/04	ND	10	10.00
Vanadium	10/22/04	ND	NLE	5.00
Zinc	10/22/04	ND	5000	50.00

ND = Not Detected, NLE = No Limit Established
* Higher of PQL's and Ground Water Quality Criteria as per N.J.A.C. 7:9-6
R.L = Reporting limit.

Report of Analysis
U.S. Army, Fort Monmouth Environmental Laboratory
NJDEP Certification # 13461

Client: U.S. Army
DPW, SELFM-PW-EV
Bldg. 173
Ft. Monmouth, NJ 07703

Lab ID #: 4072808
Sample Received: 10/20/04
Sample Matrix: Aqueous

Site: 886 Wells
Ft. Monmouth, New Jersey

Field ID#: 886MW05

Method of Digestion: E.P.A SW-846, Method 3010A
Method of Analysis: Std. Methods 18th, Method 3120B, 3112B

TAL-METALS RESULTS SUMMARY (ug/L)

Element	Date of Analysis	Result (ug/L)	Regulatory Level (ug/L)*	R.L. (ug/L)
Aluminum	10/22/04	1050	200	100

COMMENTS:

US ARMY FT. MONMOUTH ENVIRONMENTAL LABORATORY
NJDEP CERTIFICATION # 13461

Definition of Qualifiers

U: The compound was analyzed for but not detected.

B: Indicates that the compound was found in the associated method blank as well as in the sample.

J: Indicates an estimated value. This flag is used:

(1) When the mass spec and retention time data indicate the presence of a compound however the result is less than the MDL but greater than zero.

(2) When estimating the concentration of a tentatively identified compound (TIC), where a 1:1 response is assumed.

D: This flag is used to identify all compounds (target or TIC) that required a dilution.

E: Indicates the compound's concentration exceeds the calibration range of the instrument for that specific analysis.

N: This flag is only used for TICs. It indicates the presumptive evidence of a compound. For a generic characterization of a TIC, such as unknown hydrocarbon, the flag is not used.

* Higher of PQL's and Ground Water Criteria as per NJAC 7:9-6 2-Sept-97

Qualifiers

E= Value Exceeds Linear Range
D= Value from dilution
B= Compound in Related Blank
RL= Reporting Limit. The values between the MDL and RL are considered estimated.

MDL= Method Detection Limit
NLE= No Limit Established
R.T.=Retention Time

1F

COMMENTS:

VOLATILE ORGANICS

US ARMY FT. MONMOUTH ENVIRONMENTAL LABORATORY
NJDEP CERTIFICATION # 13461

Definition of Qualifiers

U: The compound was analyzed for but not detected.

B: Indicates that the compound was found in the associated method blank as well as in the sample.

J: Indicates an estimated value. This flag is used:

(1) When the mass spec and retention time data indicate the presence of a compound however the result is less than the MDL but greater than zero.

(2) When estimating the concentration of a tentatively identified compound (TIC), where a 1:1 response is assumed.

D: This flag is used to identify all compounds (target or TIC) that required a dilution.

E: Indicates the compound's concentration exceeds the calibration range of the instrument for that specific analysis.

N: This flag is only used for TICs. It indicates the presumptive evidence of a compound. For a generic characterization of a TIC, such as unknown hydrocarbon, the flag is not used.

124-48-1	Dibromochloromethane			not detected	10	0.24 ug/L	2.00 ug/L	
108-90-7	Chlorobenzene			not detected	50	0.30 ug/L	2.00 ug/L	
100-41-4	Ethylbenzene			not detected	700	0.28 ug/L	2.00 ug/L	
1330-20-7	m+p-Xylenes			not detected	nle	0.63 ug/L	4.00 ug/L	
95-47-6	o-Xylene			not detected	nle	0.24 ug/L	2.00 ug/L	
100-42-5	Styrene			not detected	100	0.34 ug/L	2.00 ug/L	
75-25-2	Bromoform			not detected	4	0.24 ug/L	2.00 ug/L	
79-34-5	1,1,2,2-Tetrachloroethane			not detected	1	0.24 ug/L	2.00 ug/L	
541-73-1	1,3-Dichlorobenzene			not detected	600	0.24 ug/L	2.00 ug/L	
106-46-7	1,4-Dichlorobenzene			not detected	75	0.25 ug/L	2.00 ug/L	
95-50-1	1,2-Dichlorobenzene			not detected	600	0.27 ug/L	2.00 ug/L	

*Results between MDL and RL are estimated values

*Higher of PQL's and Interim Criteria as per N.J.A.C. 7:9-6.9 (c).

Qualifiers

B = Compound found in related blank

E = Value above linear range

D = Value from dilution

PQL = Practical Quantitation Limit

MDL = Method Detection Limit

NLE = No Limit Established

R.T. = Retention Time

R.L = Reporting Limit
